1 Introduction

This document¹ is aimed primarily for postgraduates and project students who are interested in using MATLAB in the course of their work. Previous experience with MATLAB is not assumed. The emphasis is on “learning by doing” - try the examples out as you go along and read the explanations after. If you read the *online version*² you can paste the scripts into your editor and save a lot of time.

2 Getting started

On the teaching system you can type `matlab` at a Terminal window, or look in the Programs/ Matlab submenu of the Start menu at the bottom-left of the screen. Depending on the set-up, you might start with several windows (showing documentation, etc) or just a command line. This document will focus on command line operations. In the examples below, `>>` represents matlab’s command-line prompt.

3 The MATLAB Language

The MATLAB interface is a command line interface rather like most BASIC environments. However MATLAB works almost exclusively with matrices : scalars simply being 1-by-1 matrices. At the most elementary level, MATLAB can be a glorified calculator:
