When writing this book, we tried to create a material that would serve as a comprehensive guide to the world of computer hardware. Our goal was to offer readers not only theoretical knowledge but also practical skills that can be used in real situations. We believe that this textbook will be useful not only for high school students but also for the general public who are interested in technologies and their applications. When creating the content, we were based on many years of experience in education and practice in the field of information technology. We tried to cover a wide range of topics, from basic components of a personal computer to more complex issues, such as overclocking microprocessors or configuring RAID systems. Each topic is supplemented with practical examples and exercises that help to better understand the given issue.
