The Architecture Of Open Source Applications Amy Brown:

The Architecture of Open Source Applications, Volume II Amy Brown, Greg Wilson, 2012 Architects look at thousands of buildings during their training and study critiques of those buildings written by masters In contrast most software developers only ever get to know a handful of large programs well usually programs they wrote themselves and never study the great programs of history As a result they repeat one another s mistakes rather than building on one another s successes This second volume of The Architecture of Open Source Applications aims to change that In it the authors of twenty four open source applications explain how their software is structured and why What are each program s major components How do they interact And what did their builders learn during their development In answering these questions the contributors to this book provide unique insights into how they think

Software Design by Example Greg Wilson, 2024-04-05 The best way to learn design in any field is to study examples and some of the best examples of software design come from the tools programmers use in their own work *Software Design by Example* A Tool Based Introduction with Python therefore builds small versions of the things programmers use in order to demystify them and give some insights into how experienced programmers think From a file backup system and a testing framework to a regular expression matcher a browser layout engine and a very small compiler we explore common design patterns show how making code easier to test also makes it easier to reuse and help readers understand how debuggers profilers package managers and version control systems work so that they can use them more effectively This material can be used for self paced study in an undergraduate course on software design or as the core of an intensive weeklong workshop for working programmers Each chapter has a set of exercises ranging in size and difficulty from half a dozen lines to a full day s work Readers should be familiar with the basics of modern Python but the more advanced features of the language are explained and illustrated as they are introduced All the written material in this project can be freely reused under the terms of the Creative Commons Attribution license while all of the software is made available under the terms of the Hippocratic License All proceeds from sale of this book will go to support the Red Door Family Shelter in Toronto

Features Teaches software design by showing programmers how to build the tools they use every day Each chapter includes exercises to help readers check and deepen their understanding All the example code can be downloaded re used and modified under an open license

network and the role the computation graphs play in building your model How accelerated computing speeds up your training and how best you can utilize the resources at your disposal How to train your model using distributed training paradigms i e data model and pipeline parallelism How to leverage PyTorch ecosystems in conjunction with NVIDIA libraries and Triton to scale your model training Debugging monitoring and investigating the undesirable bottlenecks that slow down your model training How to expedite the training lifecycle and streamline your feedback loop to iterate model development A set of data tricks and techniques and how to apply them to scale your training model How to select the right tools and techniques for your deep learning project Options for managing the compute infrastructure when running at scale
