Designing Software-Intensive Systems: Methods and Principles Tiako, Pierre F.,2008-07-31 This book addresses the complex issues associated with software engineering environment capabilities for designing real time embedded software systems Provided by publisher [Information Logistics](#). [Decentralized Approaches of Information Allocation in Information Exchange Networks](#) Sven Grolik,2012-02-24 The use of modern planning and optimization systems for process synchronization in value networks requires the optimal information exchange between the entities involved The central focus of Sven Grolik s study is the development of efficient mechanisms for the coordination of information allocation by the example of interconnected transportation marketplaces Unlike traditional information allocation algorithms the algorithms developed in his analysis are based on update mechanisms which maintain a weak consistency of replicated information in the network Sven Grolik shows that these algorithms enable savings concerning the update costs as well as increase the performance within the network but at the same time guarantee compliance with quality of service levels concerning the currency of information The focus of this work is the development of decentralized online algorithms which make a logically distributed computation possible on the basis of local information The development of these innovative algorithms is based on approaches of multi agent system theory as well as distributed simulated annealing techniques [InfoWorld](#) ,1996-02-26 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects

Designing for Privacy and its Legal Framework Aurelia Tamò-Larrieux,2018-11-03 This book discusses the implementation of privacy by design in Europe a principle that has been codified within the European Data Protection Regulation GDPR While privacy by design inspires hope for future privacy sensitive designs it also introduces the need for a common understanding of the legal and technical concepts of privacy and data protection By pursuing an interdisciplinary approach and comparing the problem definitions and objectives of both disciplines this book bridges the gap between the legal and technical fields in order to enhance the regulatory and academic discourse The research presented reveals the scope of legal principles and technical tools for privacy protection and shows that the concept of privacy by design goes beyond the principle of the GDPR The book presents an analysis of how current regulations delegate the implementation of technical privacy and data protection measures to developers and describes how policy design must evolve in order to implement privacy by design and default principles *Proceedings of the ...
