Economic Aspects of Genocides, Other Mass Atrocities, and Their Prevention Charles H. Anderton, Jurgen Brauer, 2016-05-09 Alongside other types of mass atrocities genocide has received extensive scholarly policy and practitioner attention Missing however is the contribution of economists to better understand and prevent such crimes This edited collection by 41 accomplished scholars examines economic aspects of genocides other mass atrocities and their prevention Chapters include numerous case studies e g California s Yana people Australia s Aborigines peoples Stalin s killing of Ukrainians Belarus the Holocaust Rwanda DR Congo Indonesia Pakistan Colombia Mexico s drug wars and the targeting of suspects during the Vietnam war probing literature reviews and completely novel work based on extraordinary country specific datasets Also included are chapters on the demographic gendered and economic class nature of genocide Replete with research and policy relevant findings new insights are derived from behavioral economics law and economics political economy macroeconomic modeling microeconomics development economics industrial organization identity economics and other fields Analytical approaches include constrained optimization theory game theory and sophisticated statistical work in data mining econometrics and forecasting A foremost finding of the book concerns atrocity architects purposeful strategic use of violence often manipulating nonrational proclivities among ordinary people to sway their participation in mass murder Relatively understudied in the literature the book also analyzes the options of victims before during and after mass violence Further the book shows how well intended prevention efforts can backfire and increase violence how wrong post genocide design can entrench vested interests to reinforce exclusion of vulnerable peoples and how businesses can become complicit in genocide In addition to the necessity of healthy opportunities in employment education and key sectors in prevention work the book shows why new genocide prevention laws and institutions must be based on reformulated incentives that consider insights from law and economics behavioral economics and collective action economics

Practical Machine Learning with R Carsten Lange, 2024-05-20 This

textbook is a comprehensive guide to machine learning and artificial intelligence tailored for students in business and economics. It takes a hands-on approach to teach machine learning, emphasizing practical applications over complex mathematical concepts. Students are not required to have advanced mathematics knowledge such as matrix algebra or calculus. The author introduces machine learning algorithms utilizing the widely used R language for statistical analysis. Each chapter includes examples, case studies, and interactive tutorials to enhance understanding. No prior programming knowledge is needed. The book leverages the `tidymodels` package, an extension of R to streamline data processing and model workflows. This package simplifies commands, making the logic of algorithms more accessible by minimizing programming syntax hurdles. The use of `tidymodels` ensures a unified experience across various machine learning models. With interactive tutorials that students can download and follow along at their own pace, the book provides a practical approach to apply machine learning algorithms to real-world scenarios. In addition to the interactive tutorials, each chapter includes a Digital Resources section offering links to articles, videos, data, and sample R code scripts. A companion website further enriches the learning and teaching experience: <https://ai.langeanalytics.com>. This book is not just a textbook; it is a dynamic learning experience that empowers students and instructors alike with a practical and accessible approach to machine learning in business and economics.

Key Features: Unlocks machine learning basics without advanced mathematics; no calculus or matrix algebra required. Demonstrates each concept with R code and real-world data for a deep understanding; no prior programming knowledge is needed. Bridges the gap between theory and real-world applications with hands-on, interactive projects and tutorials in every chapter, guided with hints and solutions. Encourages continuous learning with chapter-specific online resources, video tutorials, R scripts, blog posts, and an online community. Supports instructors through a companion website that includes customizable materials such as slides and syllabi to fit their specific course needs.
