Lsdyna With Crash Analysis Tutorial:

Finite element theory and its application with open source codes Anthony Pickett,2020-11-10 This book combines essential finite element FE theory with a set of fourteen tutorials using relatively easy to use open source CAD FE and other numerical analysis codes so a student can undertake practical analysis and self study The theory covers fundamentals of the finite element method Formulation of element stiffness for one dimensional bar and beam two dimensional and three dimensional continuum elements plate and shell elements are derived based on energy and variational methods Linear nonlinear and transient dynamic solution methods are covered for both mechanical and field analysis problems with a focus on heat transfer Other important theoretical topics covered include element integration element assembly loads boundary conditions contact and a chapter devoted to material laws on elasticity hyperelasticity and plasticity A brief introduction to Computational Fluid Dynamics CFD is also included The second half of this book presents a chapter on using tutorials containing information on code installation on Windows and getting started and general hints on meshing modelling and analysis This is then followed by tutorials and exercises that cover linear nonlinear and dynamic mechanical analysis steady state and transient heat analysis field analysis fatigue buckling and frequency analysis a hydraulic pipe network analysis and lastly two tutorials on CFD simulation In each case theory is linked with application and exercises are included for further self study For these tutorials open source codes FreeCAD CalculiX FreeMAT and OpenFOAM are used CalculiX is a comprehensive FE package covering linear nonlinear and transient analysis One particular benefit is that its format and structure is based on Abaqus so knowledge gained is relevant to a leading commercial code FreeCAD is primarily a powerful CAD modelling code that includes good finite element meshing and modelling capabilities and is fully integrated with CalculiX FreeMAT is used in three tutorials for numerical analysis demonstrating algorithms for explicit finite element and CFD analysis And OpenFOAM is used for other CFD flow simulations The primary aim of this book is to provide a unified text covering theory and practice so a student can learn and experiment with these versatile and powerful analysis methods It should be of value to both finite element courses and for student self study

Lightweight Ballistic Composites

Ashok Bhatnagar,2016-04-19 Lightweight Ballistic Composites Military and Law Enforcement Applications Second Edition is a fully revised and updated version of this informative book that explores the many changes in composite materials technology that have occurred since the book s first release in 2008 especially the type of commercial products used by armed forces around the world Some changes can be attributed to the wars in Iraq and Afghanistan whereas others are due to massive investment by private companies to neutralize the ever increasing global threats and fulfill the military s appetite for lighter materials Soldiers are now better protected against new ballistic threats and the overall weight of body protection has been reduced while comfort has increased New military vehicles are no longer purely armored with steel and are instead lined with lightweight ballistic materials that increase the distance military vehicles can travel without refueling and also improve maneuverability The book considers all aspects of lightweight ballistic composites from fiber manufacturing to commercial products and testing Chapters also cover the many uses of lightweight ballistic composites in the military and law enforcement industries It will be an invaluable reference for ballistic composite design engineers product development engineers and all those involved in promoting new products for both defense and the law enforcement industry Gives comprehensive coverage on all aspects of lightweight ballistic composites from fiber manufacturing to commercial products and testing Discusses the wider applications of lightweight ballistic composites in military and law enforcement industries Edited by a highly respected industry expert with over thirty years experience developing lightweight composite ballistic materials and products

Methods and Applications of Artificial Intelligence

Abdelkhalak El Hami,2025-02-26 Artificial Intelligence AI is currently one of the most talked about technologies both among scientists and in public media Several factors have contributed to its development in recent years The first is access to vast quantities of data such as in the industrial field the advent of Industry 4 0 which promotes automation and data sharing in several technologies Another factor is the continuous improvement in computing power thanks to the development of ever more powerful processors and the optimization of algorithms With these two limitations removed the focus of most AI developments is on the quality of predictions The integration of AI into the industrial domain represents an exciting new frontier for innovation Just as AI has transformed many other sectors its application to mechanical technologies enables significant improvements in design manufacturing and quality control processes from computer aided design CAD to printing parameter optimization defect detection and real time monitoring This type of technology requires computer systems data with management systems and advanced algorithms which can be used by AIs In mechanical engineering AI offers many possibilities in mechanical construction predictive maintenance plant monitoring robotics additive manufacturing materials vibration etc Methods and

Applications of Artificial Intelligence is dedicated to the methods and applications of AI in mechanical engineering Each chapter clearly sets out the techniques used and developed and accompanies them with illustrative examples The book is aimed at students but is also a valuable resource for practicing engineers and research lecturers Proceedings of the 1st International Conference on Sustainability and Emerging Technologies for Smart Manufacturing Dzung Hoang Tien,Vijender Kumar Solanki,Jamaluddin Mahmud,Thi Dieu Linh Nguyen,2025-02-13 This book presents peer reviewed articles from the 1st International Conference on Sustainability and Emerging Technologies for Smart Manufacturing SETSM 2024 held on 27 28 April at Hanoi in Vietnam It includes the latest research and innovations in Sustainability and emerging technologies for Smart Manufacturing and Industry 4 0 especially innovative solutions for development of sustainable and smart eco systems for a wide range of applications in industries health care and medicine *Basic Tutorial LS-DYNA & LS-PrePost for Beginners* Dr. Arief Nur Pratomo,2023-09-23 This book emerged due to the lack of references in the community about basic things using finite element method software LS DYNA and LS PrePost Whereas lots of engineering cases that can be solved using this software The main highlight of this book is the cases that involve large deformations such as a crash box of vehicles or an impact of bullets These analyses can be applied in unlimited topic such as transportation aircraft defense and so on For example in defense application this simulations can be used to design bullet protection plate and also evaluate the anti ballistic performance without doing experiments that are usually very expensive and time consuming Therefore with this simulation we can carry out the design process more cheaply and faster This book contains detailed procedures for using LS DYNA and LS PrePost for cases of low speed collisions such as crash box impact up to high speed impact of a bullet Cases such as armor for combat vehicles to military standard buildings can use the method described in this book Other cases such as the bullet tip design can also be evaluated Thus the method in this book can also be adopted for other broader analyses

Department of Civil and Environmental Engineering,2009 Cable median barriers CMBs have become a popular roadside safety device for preventing cross median collisions It is common to model barrier collisions using finite element analysis FEA One of the most important and difficult interactions to model is the interaction between the vehicle and the cables Currently used cable models incorporate null shells as contact surfaces around beam elements that often cause snagging with the vehicle s components and can exhibit unrealistic contact behavior Since LS DYNA supports direct contact definitions with beam elements it would be ideal to model cables with only beam elements to reduce the number of elements and thus the computational cost An analytical

program is presented to validate both the current cable model and the new one based only on beam contacts Results from finite element FE static and dynamic simulations are presented and compared to closed form solutions to verify the current and new cable models A rigid bar rigid impactor problem is presented to validate and compare the contact behavior when various contact definitions and contact interfaces are implemented FE simulations of an impactor cable system are also presented to examine contact interactions when one of the bodies is flexible These impact simulation results are compared to closed form analyses Finally full scale FE CMB crash simulations are performed using both contact strategies The results are compared and simulation durations for each model are also presented It is shown that the use of null shells for contact purposes is not necessary since they increase computational cost and are responsible for inaccuracies and instabilities in the models
