Landscape Evolution Kerry Gallagher, Stuart J. Jones, John Wainwright, 2008 The morphology of Earth's surface reflects the interaction of climate tectonics and denudational processes operating over a wide range of spatial and temporal scales These processes can be considered catastrophic or continuous depending on the timescale of observation or interest Recent research had required integration of historically distinct subjects such as geomorphology sedimentology climatology and tectonics Together these have provided new insights into absolute and relative rates of denudation and the factors that control the many dynamic processes involved Specific subject areas covered are sediment transport processes and the timescales of competing processes the role of the geological record and landscapes in constraining different processes the nature of landscape evolution at different spatial scales and in contrasting geological environments

Phylogenomic Discordance in Plant Systematics Stefan Wanke, Susann Wicke, 2023-11-15 Phylogenetics often uncovers contradicting hypotheses regarding the relationships within the same group of organisms a phenomenon known since the beginning of the molecular systematics era While historically single marker based analyses produced discordance nowadays entire cellular genomes or portions of the same genomic compartment conflict with others or the rest respectively In contrast to the beginning of the molecular systematics era when adding markers and taxa offered a way out of systematic errors genome inference based incongruences cannot be addressed and

explained easily Disagreeing phylogenomic hypotheses might originate from various evolutionary processes including but not limited to hybridization or incomplete lineage sorting thereby leading to gene tree versus species tree associated discrepancies Today this can be expanded to genome discordance where phylogenomic signals of organellar genomes plastid mitochondrial and the nuclear genome disagree due to intrinsically different coalescent paths or phenomena like organelle capture *Evolutionary Analysis, Books a la Carte Edition* Jon Herron, Scott Freeman, 2013-08-12 For undergraduate courses in Evolution By presenting evolutionary biology as a dynamic ongoing research effort and organizing discussions around questions this best selling text helps you think like a scientist as you learn about evolution The authors convey the excitement and logic of evolutionary science by introducing principles through recent and classical studies and by emphasizing real world applications In the Fifth Edition co author Jon Herron takes the lead in streamlining and updating content to reflect key changes in the field The design and art program have also been updated for enhanced clarity

Cooper, Hildegard Kehrer-Sawatzki, 2008-10-13 This splendid compendium will be the standard reference work for years to come a handbook to browse to consult to look things up in and to read with pleasure wonder and post Darwinian exhilaration Richard Dawkins This is a marvellous book It should be in every university library preferably in several copies and every reader of this journal should add it to their next grant application It really is that good I have already found this book to be invaluable For many years to come these two volumes will be the starting point for anyone wishing to find out about virtually any subject relating to human genetics Any scientist working on humans or other animals will find many things in these pages that will stimulate inform and inspire The authors editors and publishers are to be congratulated for their work order a copy now HUMAN GENETICS The publishers and editors deserve to be congratulated for publishing this major book which coincides with the 200th anniversary of the birth of Charles Darwin The book is well timed with biologists theologians and sociologists engaged in intense debate on the Darwinian Theory on the origin of species evolution and natural selection There is little doubt that this marvellous publication should be in the library of universities and academic institutions dealing with basic and applied biology research and education It will not be surprising if the individual academic or researcher decides to invest in this resource and enrich their personal collection of leading books in genetics and genomics GENOMIC MEDICINE A Unique Collection of High Quality Articles Derived from the Acclaimed Encyclopedia of Life Sciences The revolution in human molecular genetics which has taken place over the last three decades has yielded a wealth of information not only on the structure and function of our genes but also on gene expression mutation and polymorphic variation Over the last five years the focus has moved from genes to genomes Even though the annotation of our 30 000 genes is still in progress genome wide studies have already yielded abundant evidence for the signatures of past selection and adaptive evolution within human gene sequences Further the completion of the sequencing of the 3 billion base pair human genome coupled with the increasing availability of other vertebrate genome sequences has ushered in a new era of comparative genomics We are now able to identify many of the molecular events from the chromosomal level down to the single base pair that have occurred during vertebrate mammalian primate and hominid evolution Indeed the detailed comparison of the human and chimpanzee genomes has begun to reveal some of the genetic changes that have been involved in the development of human lineage specific traits We are thus acquiring the ability to ask searching questions about our origins about the demographic processes associated with the global radiation of humankind as well as some of the unique adaptations that make us human Evolutionary biology has become so broad that its impact may be felt across the spectrum of the biological sciences The aim of the Handbook of Human Molecular Evolution is relatively straightforward to bring together under the same cover the many and varied strands of our knowledge of human primate vertebrate molecular evolution Hence the 282 chapters that comprise this essential reference work have been thematically arranged into twelve sections covering the whole scope of research into human molecular evolution General Concepts in Evolutionary Genetics Mutation Adaptation and Natural

Tourism and Innovation C. Michael Hall, Allan M. Williams, 2019-11-25 This ground breaking volume on the relationships between tourism and innovation provides an overview of relevant innovation theories and related literatures on entrepreneurship productivity regional development and competitiveness and their significance to contemporary tourism practices Innovation is a key concept in business and entrepreneurial studies and the broader social sciences Yet despite its policy and academic importance historically little attention has been given to the role of innovation in tourism and the corresponding contribution of tourism related human mobility to regional firm and product innovation This book emphasises that innovation in tourism is much more than a series of technological innovations as important as they are and instead needs to be understood in an economic social and political context with particular stress being placed on the extent to which innovations are shaped by the framework of governance and regulation as well as by institutional factors and activities of individual actors and entrepreneurs It is structured so as to introduce the reader to the overall significance of innovation at various levels and the role that innovation plays in firm and place competition Supported with case studies throughout this book is essential reading for all tourism students
