**Smart Intelligent Aircraft Structures (SARISTU)** Piet Christof Wölcken, Michael Papadopoulos, 2015-09-04 The book includes the research papers presented in the final conference of the EU funded SARISTU Smart Intelligent Aircraft Structures project held at Moscow Russia between 19-21 of May 2015 The SARISTU project which was launched in September 2011 developed and tested a variety of individual applications as well as their combinations With a strong focus on actual physical integration and subsequent material and structural testing SARISTU has been responsible for important progress on the route to industrialization of structure integrated functionalities such as Conformal Morphing Structural Health Monitoring and Nanocomposites The gap and edge free deformation of aerodynamic surfaces known as conformal morphing has gained previously unrealized capabilities such as inherent de-icing erosion protection and lightning strike protection while at the same time the technological risk has been greatly reduced Individual structural health monitoring techniques can now be applied at the part manufacturing level rather than via extending an aircraft's time in the final assembly line And nanocomposites no longer lose their improved properties when trying to upscale from neat resin testing to full laminate testing at element level As such this book familiarizes the reader with the most significant developments achievements and key technological steps which have been made possible through the four year long cooperation of 64 leading entities from 16 different countries with the financial support of the European Commission

**Digital Twins** Christoph Herwig, Ralf Pörtner, Johannes Möller, 2021-04-25 This is the first of two volumes that together provide an overview of the latest advances in the generation and application of digital twins in bioprocess design and optimization Both processes have undergone significant changes over the past few decades moving from data driven approaches into the 21st century digitalization of the bioprocess industry Moreover the high demand for biotechnological products calls for efficient methods during research and development as well as during tech transfer and routine manufacturing In this regard one promising tool is the use of digital twins which offer a virtual representation of the bioprocess They reflect the mechanistic of the biological system and the interactions between process parameters key performance indicators and product quality attributes in the form of a mathematical process model Furthermore digital twins allow us to use computer aided methods to gain an improved process understanding to test and plan novel bioprocesses and to efficiently monitor them This book explains the mathematical structure of digital twins their development and the model's respective parts as well as concepts for the knowledge driven generation and structural variability of digital twins Covering fundamentals as well as applications the two volumes offer the ideal introduction to the topic for researchers in academy and industry alike

**Manufacturing Systems** Daniel Rossit, Chaudhery Mustansar Hussain, 2023-04-13 Design of Smart Manufacturing Systems covers the fundamentals and applications of smart manufacturing or Industry 4.0 system design along with interesting case studies. Digitization and Cyber Physical Systems (CPS) have vastly increased the amount of data available to manufacturing production systems. This book addresses the planning, modeling, and experimentation of different decision-making problems as well as the conditions that affect manufacturing. In addition, recent developments in the design of smart manufacturing and its applications are explained, covering the needs of both researchers and practitioners. To fully navigate the challenges and opportunities of smart manufacturing systems, contributions are drawn from operations research, information systems, computer science, and industrial engineering, as well as manufacturing engineering. Addresses hot topics like cybersecurity and artificial intelligence in smart manufacturing systems. Provides case studies that show how solutions have been applied in practice. Explores how smart manufacturing systems may impact on operators. **Smart Automation to Smart**

**Manufacturing** Uthayan Elangovan, 2019-05-07 The advent of modern technology and the fourth Industrial Revolution, particularly the industrial Internet of Things, has brought enormous changes to the manufacturing industry. This book is about the growth of smart factories. We live in a smart, connected world. The number of things connected to the Internet currently surpasses the number of people in the world, and we are accelerating to numerous linked gadgets by the end of the decade. For manufacturers, the implications of this emerging Internet of Things are huge. Manufacturers must begin to transform existing business processes and fundamentally rethink how they create, operate, and service smart, connected products in the era of Industry 4.0. This book is virtually a one-volume encyclopedia on industrial Internet of Things; the author explains its evolution, M2M data communication, real-time business applications, and business use cases, as well as the technology prerequisite along with a high-level overview of implementing IIoT to achieve smart manufacturing, focus on improving existing processes to increase efficiencies, and concludes with a view on careers in industrial automation.
