Kluever, 2018-03-12 Thorough coverage of space flight topics with self contained chapters serving a variety of courses in orbital mechanics spacecraft dynamics and astronautics This concise yet comprehensive book on space flight dynamics addresses all phases of a space mission getting to space launch trajectories satellite motion in space orbital motion orbit transfers attitude dynamics and returning from space entry flight mechanics It focuses on orbital mechanics with emphasis on two body motion orbit determination and orbital maneuvers with applications in Earth centered missions and interplanetary missions Space Flight Dynamics presents wide ranging information on a host of topics not always covered in competing books It discusses relative motion entry flight mechanics low thrust transfers rocket propulsion fundamentals attitude dynamics and attitude control The book is filled with illustrated concepts and real world examples drawn from the space industry Additionally the book includes a computational toolbox composed of MATLAB M files for performing space mission analysis Key features Provides practical real world examples illustrating key concepts throughout the book Accompanied by a website containing MATLAB M files for conducting space mission analysis Presents numerous space flight topics absent in competing titles Space Flight Dynamics is a welcome addition to the field ideally suited for upper level undergraduate and graduate students studying aerospace engineering

Spacecraft Dynamics and Control Enrico Canuto, Carlo Novara, Donato Carlucci, Carlos Perez-Montenegro, Luca Massotti, 2018-03-08 Spacecraft Dynamics and Control The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its

surrounding environment The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code

Tewari,2007-11-15 Modern aerospace vehicles such as the space shuttle other launch vehicles and long range ballistic missiles do not discriminate between atmospheric and space flight Most texts on flight dynamics however make this artificial distinction and therefore do not simultaneously cover aircraft and spacecraft Bridging this gap in the literature Atmospheric and Space Flight Dynamics is a unified presentation demonstrating that the two disciplines have actually evolved from the same set of physical principles Key features include an introduction to a broad range of modern topics in an accessible yet mathematically rigorous presentation many numerical examples and simulations utilizing MATLAB and Simulink software used as an instructional hands on tool moving away from the cookbook approach found in other works and numerous illustrations and end of chapter exercises Primarily useful as a textbook for advanced undergraduate and beginning graduate level students the work is also an excellent reference or self study guide for researchers and practitioners in aerospace engineering aviation mechanical engineering dynamics astrodynamics aeronautics and astronautics
