[Biocivilisations](#) Predrag Slijepcevic, 2023-05-18 Biocivilisations is a fascinating original and important exploration into how complex civilisations existed on Earth long before humans What is life This is arguably the most important question in all of science Many scientists believe life can be reduced to mechanistic factors such as genes and information codes Everything can be sequenced and explained But in a world as rich and complex as this one can such an assertion really be true A growing army of scientists philosophers and artists do not share this mechanistic vision for the science of life The gene metaphor is not only too simplistic but also misleading If there is a way to reduce life to a single principle how does that principle acknowledge the creativity of life that turns both genetic and information determinism on their heads Biocivilisations is a groundbreaking book exploring the mysteries of life and its deep uncertainty Dr Predrag Slijepcevi turns anthropocentric scientific thinking on its head showing how the humble bacteria created the equivalent of cities and connected them with information highways bringing our planet to life three thousand million years ago He explains how bacteria amoebas plants insects birds whales elephants and countless other species not only preceded human beings but also demonstrate elements of complex civilisation communication agriculture science art medicine and more that we associate with human achievement More than 99.99 percent of life on Earth has existed without humanity and life will continue without humans long into the future Biocivilisations is an important rethinking of the current scientific paradigm It

challenges us to reconsider the limited scope and time window of our current scientific revolution and to fundamentally reimagine what we call life on Earth

*Genome Editing and Biological Weapons* Katherine Paris, 2022-12-15 This monograph introduces current genome editing technologies clustered regularly interspaced short palindromic repeat CRISPR associated Cas systems transcription activator like effector nucleases TALENs and zinc finger nucleases ZFNs and provides an assessment of the risk of misuse of these technologies based on the following parameters accessibility ease of misuse magnitude of potential harm and imminence of potential misuse The findings from this assessment are applied to analyze and evaluate the threat posed by the intentional misuse of genome editing technologies to develop biological weapons Furthermore the book discusses the implications of misuse for different applications of genome editing such as making existing pathogens more dangerous modifying the human microbiome weaponizing gene drives engineering super soldiers and augmenting the general population to confer economic advantages Technologies that enable genome editing with programmable nucleases including CRISPR TALEN and ZFN allow for the precise genetic modification of organisms and cultured cells While these technologies are used for a variety of beneficial applications intelligence and defense experts have raised concerns that genome editing technologies especially CRISPR could be misused to develop new and improved biological weapons Furthermore experts worry that the number and type of actors who could potentially misuse genome editing is dramatically increasing given the democratization of biology which is allowing biology to become more accessible to everyone including nonexperts The book provides a comprehensive assessment of how feasible it is for users with different levels of knowledge and skill to acquire and then to apply the technologies to develop a biological weapon It also provides an assessment of governability and a tailored set of recommendations that address security concerns These recommendations are sensitive to the cost benefit trade off of regulating genome editing technologies The book targets researchers as well as intelligence analysts defense and security personnel and policymakers
