## **Superstring Theory A Survey Michael B Green:**

The Superworld III Antonino Zichichi, 2013-03-13 During August 1988 a group of 67 physicists from 45 laboratories in 17 countries met in Erice for the 26th Course of the International School of Subnuclear Physics The countries represented were Australia Austria Canada China Czechoslovakia Denmark France Federal Republic of Germany India Italy Poland Portugal Spain Sweden Switzerland United Kingdom and the United States of America The School was sponsored by the European Physical Society EPS the Italian Ministry of Public Education MPI the Sicilian Regional Government ERS and the Weizmann Institute of Science The interest in the Superworld is still very high This is why for the third year the Erice School has been devoted to a great extent to review the many developments in Superstring Supermembranes with their problems of quantization and compactification All these theoretical speculations are very far from the experimental frontier In order to keep our feet on the ground a series of lectures was included to cover the status of CP violation of the Heavy Leptons together with the projects for new physics at Gran Sasso and Fermi Lab For completeness Julian Schwinger reviewed the great problem of Anomalies in Quantum Field Theory and Shelly Glashow gave a closing lecture on the end of Superworld If nothing new happens next year there will be no Superworld in Erice Superstrings: The First 15 Years Of Superstring Theory (Reprints + Commentary - In 2 Volumes) John H Schwarz, 1985-09-01 The discovery by Green and Schwarz in 1984 that ten dimensional superstring theory is anomaly free and finite only if the Yang Mills gauge group is  $SO_{32}$  or  $E_8 \times E_8$  has made the phenomenological possibilities of superstrings evident This has resulted in a sudden surge of interest in superstrings unification Since this fast developing field is new to almost all theoretical physicist this collection of basic pre 1985 references should be very valuable This two volumes contain over 1000 pages of reprints plus some introductory comments by J Schwarz Superstrings '88 Michael B. Green, 1989 **Superstrings**, 1988 Dirichlet Branes and Mirror Symmetry, 2009 Research in string theory has generated a rich interaction with algebraic geometry with exciting new work that includes the Strominger Yau Zaslow conjecture This monograph builds on lectures at the 2002 Clay School on Geometry and String Theory that sought to bridge the gap between the languages of string theory and algebraic geometry presenting an updated discussion that includes subsequent developments The group of distinguished mathematicians and mathematical physicists who produced this monograph worked as a team to create a unique volume Its overall goal is to explore the physical and mathematical aspects of Dirichlet branes The narrative is organized around two principal ideas Kontsevich s Homological Mirror Symmetry conjecture and the Strominger Yau Zaslow conjecture The authors explain how Kontsevich s conjecture is equivalent to the identification of two different categories of Dirichlet branes They also explore the ramifications and current state of the Strominger Yau Zaslow conjecture They relate the ideas to active areas of research that include the McKay correspondence topological quantum field theory and stability structures The authors were not satisfied to tell their story twice from separate mathematics and physics points of view Instead theirs is a unified presentation

offered in a way that both mathematicians and physicists can follow without having all of the foundations of both subjects at their immediate disposal

**Superstring Theory** Michael B. Green, John H. Schwarz, Edward Witten, 2012-07-26 The twenty fifth anniversary edition featuring a new Preface invaluable for graduate students and researchers in high energy physics and astrophysics

**String-Math 2013** Ron Donagi, Michael R. Douglas, Ljudmila Kamenova, Martin Rocek, 2014-12-02 This volume contains the proceedings of the conference String Math 2013 which was held June 17 21 2013 at the Simons Center for Geometry and Physics at Stony Brook University This was the third in a series of annual meetings devoted to the interface of mathematics and string theory Topics include the latest developments in supersymmetric and topological field theory localization techniques the mathematics of quantum field theory superstring compactification and duality scattering amplitudes and their relation to Hodge theory mirror symmetry and two dimensional conformal field theory and many more This book will be important reading for researchers and students in the area and for all mathematicians and string theorists who want to update themselves on developments in the math string interface

*The Ricci Flow in Riemannian Geometry* Ben Andrews, Christopher Hopper, 2011 This book focuses on Hamilton's Ricci flow beginning with a detailed discussion of the required aspects of differential geometry progressing through existence and regularity theory compactness theorems for Riemannian manifolds and Perelman's noncollapsing results and culminating in a detailed analysis of the evolution of curvature where recent breakthroughs of Bamner and Wilking and Brendle and Schoen have led to a proof of the differentiable 1 4 pinching sphere theorem
