scientific guide to becoming happy Vladislav Tsekov, 2017-03-30 Seminar paper from the year 2015 in the subject Psychology Miscellaneous grade 1.0 LMU Munich language English abstract We want to be happy but what exactly does this mean Is happiness an emotion or a way of life is it temporary or constant is it something that depends on you or on your surroundings A specific branch in psychology positive psychology has embarked on a journey to find the answers to those and similar questions Everybody wants to be happy You me your best friend your family Even your boss Happiness is such a lucrative incentive that it motivates people to do the craziest things swimming with sharks jumping from airplanes dieting training and even working from 9 to 5 for their entire life Since happiness plays such an important part in our life we ought to know what it is and where we can easily find it right Wrong This is a challenging task resulting in years of wrong decisions and frustrating activities You set yourself a goal to become a lawyer and earn a lot of money You invest hundreds of hours into studying and practice spend thousands of dollars on education until you finally get into court and realize that this isn't what you wanted at all The problem is that we live in a society which is lacking introspection and self knowledge In most cases our parents teachers and friends tell us what is right for us They fool us into thinking that we have to strive for certain things in order to be happy Because we never question authority and we comply gently with societal pressure we end up with a major depression at the age of 30 So the next time you find yourself doing things other people have told you to do stop and think for a second if this is really what you want to do *Special* Melanie Dimmitt, 2019-09-01 Most of us expect to meander through the motions of love marriage and textbook baby in the carriage but once in a while life has something a little more

Sustainable Capitalism and the Pursuit of Well-Being Neil

Harrison,2013-12-17 Sustainable development is the central challenge of the 21st Century How can human civilization continue to develop without destroying the natural systems on which it depends Environmentalists tell us that capitalism is the problem because it feeds our self interest They tell us that we have to restrain ourselves and only consume what the Earth can sustain Or governments must tell us what we can and cannot buy This book uses the science of complex systems to explain why governments cannot deliver sustainability or happiness and how self interest can be used to make society sustainable Capitalism won the Cold War until the Great Recession of 2008 it seemed to be the perfect system But more of us are unhappy even as it has ravaged the planet The central problem is the paradigm on which our social systems are founded that more consumption production possessions is always better Based on research from political economy philosophy and psychology this book shows that the problem is not self interest We are unhappy because we have been taught that our interests are material and that buying stuff will make us happy Yet social pressure to consume only prevents us from satisfying our basic psychological needs and fully enjoying life For that we need to pursue our personal well being Because this also reduces our material consumption environmental sustainability comes from each of us knowing what's truly good for our selves Even without the constant economic growth that harms the planet and damages our lives capitalism also is sustainable This book will be of interest to scholars and students of sustainability civil societyactivists and social
