Alex Through the Looking-Glass Alex Bellos, 2014-04-15 From triangles, rotations and power laws to fractals, cones and curves bestselling author Alex Bellos takes you on a journey of mathematical discovery with his signature wit, engaging stories and limitless enthusiasm As he narrates a series of eye-opening encounters with lively personalities all over the world Alex demonstrates how numbers have come to be our friends, are fascinating and extremely accessible and how they have changed our world He turns even the dreaded calculus into an easy-to-grasp mathematical exposition and sifts through over

30 000 survey submissions to reveal the world's favourite number In Germany he meets the engineer who designed the first roller coaster loop whilst in India he joins the world's highly numerate community at the International Congress of Mathematicians He explores the wonders behind the Game of Life program and explains mathematical logic growth and negative numbers Stateside he hangs out with a private detective in Oregon and meets the mathematician who looks for universes from his garage in Illinois Read this captivating book and you won't realise that you're learning about complex concepts Alex will get you hooked on maths as he delves deep into humankind's turbulent relationship with numbers and proves just how much fun we can have with them

Probability, Choice, and Reason Leighton Vaughan Williams, 2021-09-15

Much of our thinking is flawed because it is based on faulty intuition By using the framework and tools of probability and statistics we can overcome this to provide solutions to many real world problems and paradoxes We show how to do this and find answers that are frequently very contrary to what we might expect Along the way we venture into diverse realms and thought experiments which challenge the way that we see the world Features An insightful and engaging discussion of some of the key ideas of probabilistic and statistical thinking Many classic and novel problems paradoxes and puzzles An exploration of some of the big questions involving the use of choice and reason in an uncertain world The application of probability statistics and Bayesian methods to a wide range of subjects including economics finance law and medicine Exercises references and links for those wishing to cross reference or to probe further Solutions to exercises at the end of the book This book should serve as an invaluable and fascinating resource for university college and high school students who wish to extend their reading as well as for teachers and lecturers who want to liven up their courses while retaining academic rigour It will also appeal to anyone who wishes to develop skills with numbers or has an interest in the many statistical and other paradoxes that permeate our lives Indeed anyone studying the sciences social sciences or humanities on a formal or informal basis will enjoy and benefit from this book

Mindshift Barbara Oakley, PhD, 2017-04-18

Mindshift reveals how we can overcome stereotypes and preconceived ideas about what is possible for us to learn and become At a time when we are constantly being asked to retrain and reinvent ourselves to adapt to new technologies and changing industries this book shows us how we can uncover and develop talents we didn't realize we had no matter what our age or background We're often told to follow our passions But in Mindshift Dr Barbara Oakley shows us how we can broaden our passions Drawing on the latest neuroscientific insights Dr Oakley shepherds us past simplistic ideas of aptitude and ability which provide only a snapshot of who we are now with little consideration about how we can change Even seemingly bad traits such as a poor memory come with hidden advantages like increased creativity Profiling people from around the world who have overcome learning limitations of all kinds Dr Oakley shows us how we can turn perceived weaknesses such as impostor syndrome and advancing age into strengths People may feel like they're at a disadvantage if they pursue a new field later in life yet those who change careers can be fertile cross pollinators They bring valuable insights from one discipline to

another Dr Oakley teaches us strategies for learning that are backed by neuroscience so that we can realize the joy and benefits of a learning lifestyle Mindshift takes us deep inside the world of how people change and grow Our biggest stumbling blocks can be our own preconceptions but with the right mental insights we can tap into hidden potential and create new opportunities

Here's Looking at Euclid Alex Bellos, 2010-06-15 Too often math gets a bad rap characterized as dry and difficult But Alex Bellos says math can be inspiring and brilliantly creative Mathematical thought is one of the great achievements of the human race and arguably the foundation of all human progress The world of mathematics is a remarkable place Bellos has traveled all around the globe and has plunged into history to uncover fascinating stories of mathematical achievement from the breakthroughs of Euclid the greatest mathematician of all time to the creations of the Zen master of origami one of the hottest areas of mathematical work today Taking us into the wilds of the Amazon he tells the story of a tribe there who can count only to five and reports on the latest findings about the math instinct including the revelation that ants can actually count how many steps they've taken Journeying to the Bay of Bengal he interviews a Hindu sage about the brilliant mathematical insights of the Buddha while in Japan he visits the godfather of Sudoku and introduces the brainteasing delights of mathematical games Exploring the mysteries of randomness he explains why it is impossible for our iPods to truly randomly select songs In probing the many intrigues of that most beloved of numbers pi he visits with two brothers so obsessed with the elusive number that they built a supercomputer in their Manhattan apartment to study it Throughout the journey is enhanced with a wealth of intriguing illustrations such as of the clever puzzles known as tangrams and the crochet creation of an American math professor who suddenly realized one day that she could knit a representation of higher dimensional space that no one had been able to visualize Whether writing about how algebra solved Swedish traffic problems visiting the Mental Calculation World Cup to disclose the secrets of lightning calculation or exploring the links between pineapples and beautiful teeth Bellos is a wonderfully engaging guide who never fails to delight even as he edifies

Here's Looking at Euclid is a rare gem that brings the beauty of math to life

Understanding Learning Difficulties in Maths: Dyscalculia, Dyslexia or Dyspraxia? Judy Hornigold, 2017-10-16 Why do some pupils experience maths learning difficulties How can you determine whether there is a specific learning difficulty such as dyscalculia dyspraxia or dyslexia What teaching strategies can help overcome maths anxiety and specific maths learning difficulties Without doubt maths is one of the most important subjects taught in schools and yet it is the one subject that can strike fear and dread in children from the very start of their education In this book Judy Hornigold explores potential causes of maths learning difficulties and particularly the specific difficulties that learners with dyscalculia dyslexia and or dyspraxia experience It considers how general maths anxiety impedes mathematical development and then examines whether this or a more fundamental and specific difficulty with maths such as dyscalculia is the real root of difficulties The book then looks in detail at a wide range of strategies to help overcome general maths anxiety and more specific learning difficulties It addresses four distinct areas core
