*Readings in Artificial Intelligence and Software Engineering*

covers the main techniques and application of artificial intelligence and software engineering The ultimate goal of artificial

intelligence applied to software engineering is automatic programming Automatic programming would allow a user to simply

say what is wanted and have a program produced completely automatically This book is organized into 11 parts

encompassing 34 chapters that specifically tackle the topics of deductive synthesis program transformations program

verification and programming tutors The opening parts provide an introduction to the key ideas to the deductive approach

namely the correspondence between theorems and specifications and between constructive proofs and programs These parts

also describes automatic theorem provers whose development has been designed for the programming domain The subsequent

parts present generalized program transformation systems the problems involved in using natural language input the

features of very high level languages and the advantages of the programming by example system Other parts explore the

intelligent assistant approach and the significance and relation of programming knowledge in other programming system The

concluding parts focus on the features of the domain knowledge system and the artificial intelligence programming Software

engineers and designers and computer programmers as well as researchers in the field of artificial intelligence will find this

book invaluable
