Probabilistic Graphical Models Principles And Techniques Solution Manual:

Causal Factor Investing Marcos M. López de Prado,2023-11-09 Virtually all journal articles in the factor investing literature make associational claims in denial of the causal content of factor models Authors do not identify the causal graph consistent with the observed phenomenon they justify their chosen model specification in terms of correlations and they do not propose experiments for falsifying causal mechanisms Absent a causal theory their findings are likely false due to rampant backtest overfitting and incorrect specification choices This Element differentiates between type A and type B spurious claims and explains how both types prevent factor investing from advancing beyond its current phenomenological stage It analyzes the current state of causal confusion in the factor investing literature and proposes solutions with the potential to transform factor investing into a truly scientific discipline This title is also available as Open Access on Cambridge Core

Climate Change Effects on Civil Infrastructure Mohammed M. Ettouney,2025-03-31 Climate change challenges are unlike any hazard that infrastructure and related shareholders have faced for millennia These challenges and the systems that are vulnerable to them as well as the resulting consequences social economic physical natural health costs etc are interrelated in countless ways and span regions countries oceans and continents The design analysis maintenance operations economics and life cycle of civil infrastructure are dependent upon climatic effects and this book addresses the intersections between climate change infrastructures and related decision paradigms such as risk resilience preparedness adaptation or mitigation from the viewpoint of climate change demands Presents an objective categorization of climate change demands as related to civil infrastructure and society Offers a comprehensive roadmap on how to plan for and address climate change effects on civil infrastructure Includes numerous objective and practical case studies throughout to highlight important subjects *Catalog of Copyright Entries. manipulated by reasoning algorithms These models can also be learned automatically from data allowing the approach to be used in cases where manually constructing a model is difficult or even impossible Because uncertainty is an inescapable aspect of most real world applications the book focuses on probabilistic models which make the uncertainty explicit and provide models that are more faithful to reality Probabilistic Graphical Models discusses a variety of models spanning Bayesian networks undirected Markov networks discrete and continuous models and extensions to deal with dynamical systems and relational data For each class of models the text describes the three fundamental cornerstones representation inference and learning presenting both basic concepts and advanced techniques Finally the book considers the use of the proposed framework for causal reasoning and decision making under uncertainty The main text in each chapter provides the detailed technical development of the key ideas Most chapters also include boxes with additional material skill boxes which describe techniques case study boxes which discuss empirical cases related to the approach described in the text including applications in computer vision robotics natural language understanding and computational biology and concept boxes which present significant concepts drawn from the material in the chapter Instructors and readers can group chapters in various combinations from core topics to more technically advanced material to suit their particular needs **Choice** ,1983
