**Dependable Computing - EDCC 2005** Mario Dal Cin, Mohamed Kaâniche, András Pataricza, 2005-03-31 It is always a special honor to chair the European Dependable Computing Conference EDCC EDCC has become one of the well established conferences in the field of dependability in the European research area Budapest was selected as the host of this conference due to its traditions in organizing international scientific events and its traditional role of serving as a meeting point between East and West EDCC 5 was the fifth in the series of these high quality scientific conferences In addition to the overall significance of such a pan European event this year's conference was a special one due to historic reasons The roots of EDCC date back to the moment when the Iron Curtain fell Originally two groups of scientists from different European countries in Western and Eastern Europe who were active in research and education related to dependability created a joint forum in order to merge their communities as early as in 1989 This trend has continued up to today This year's conference was the first one where the overwhelming majority of the research groups belong to the family of European nations united in the European Union During the past 16 years we observed that the same roots in all the professional cultural and scientific senses led to a seamless integration of these research communities previously separated artificially for a long time EDCC has become one of the main European platforms to exchange new search ideas in the field of dependability **Dependable Computing--EDCC ...**, 2005

**Aerospace Actuators 1** Jean-Charles Maré, 2016-06-14 This book is the first of a series of volumes that cover the topic of aerospace actuators following a systems based approach This first volume provides general information on actuators and their reliability and focuses on hydraulically supplied actuators Emphasis is put on hydraulic power actuators as a technology that is used extensively for all aircraft including newer aircraft Currently takeovers by major corporations of smaller companies in this field is threatening the expertise of aerospace hydraulics and has inevitably led to a loss of expertise Further removal of hydraulics teaching in engineering degrees means there is a need to capitalize efforts in this field in order to move it forward as a means of providing safer greener cheaper and faster aerospace services The topics covered in this set of books constitute a significant source of information for individuals and engineers seeking to learn more about aerospace hydraulics

**Static Analysis of Software** Jean-Louis Boulanger, 2013-02-07 The existing literature currently available to students and researchers is very general covering only the formal techniques of static analysis This book presents real examples of the formal techniques called abstract interpretation currently being used in various industrial fields railway aeronautics space automotive etc The purpose of this book is to present students and researchers in a single book with the wealth of experience of people who are intrinsically involved in the realization and evaluation of software based safety critical systems As the authors are people currently working within the industry the usual problems of confidentiality which can occur with other books is not an issue and so makes it possible to supply new useful information photos architectural plans real examples **Advances in Aeronautical Informatics** Umut Durak, Jürgen Becker, Sven Hartmann, Nikolaos S.

Voros,2018-05-10 The history of flight started with the pioneer era The introduction of mechanical controls including hydraulics then led to the second era Later with the utilization of computers and automation in aircraft we reached the third era Now we are moving towards the fourth era of flight namely Flight 4.0 which is characterized by smart and connected aircraft that extensively exploit emerging information and communication technologies Aeronautical informatics is advancing rapidly through the synergy between information and communication technologies and aeronautics Multi core avionic platforms wireless avionics networking service oriented architectures and IoT data sciences and semantic infrastructures are shaping systems to come Increasing autonomy requirements are challenging the community to investigate new ways to assure safety Modern software engineering methodologies and real time software techniques are altering the established development practice Universities are starting to align their aerospace engineering and computer science curriculums in order to address this synergy This book is a unique compilation of advancements in aeronautical informatics introducing the changing technology landscape of flight with respect to a new push in information and communication technology

Vernon R Schmitt,Gavin D Jenney,James W Morris,1998-10-01 Fly by wire in aircraft flight control design is more than adding a simple wire it is a sophisticated system that changes the way aircraft are designed and the way they fly Prepared and written by experts who directed or staffed fly by wire research and development programs this book includes explanations of the system s design and application providing both the how and the why of this remarkable technology Chapters include Introduction Background of Fly by Wire Required Programs The Survivable Flight Control System SFCS Program Technology Transition and Application      **The Power to Fly** Brian H. Rowe,2005 As a wide eyed English boy Brian H Rowe watched the Battle of Britain unfold in the skies above his native country The experience sealed his fascination with flying machines and hinted at the importance of aircraft to the future of civilization In this gripping memoir the author tells the story of his rise from an unassuming post World War II engineering apprentice to become president of General Electric Aircraft Engines the American company whose jet engines helped win the Cold War and make commercial flight affordable for average citizens This is a personal account replete with engineering anecdotes and hitherto unpublished details about the thinking behind major GE products including the F404 engines that power the U S Navys F A 18 jets the F101 engines that were selected for the Air Forces B 1 bombers and the CFM56 engines that power today's Boeing 737s and Airbus A320s for instance There is

plenty here to feed the interest of those who have followed the historical competition between GE and its competitors Pratt Whitney and Rolls Royce Later in his career managerial and strategic challenges became Rowes main focus and the author gives insight into how he dealt with those as well Overall though this memoir demonstrates the importance of human relationships and ingenuity as the true engine of history
