ranging from Trends in Theory to Software and Information Engineering attest to this Apart from the topics mentioned above SOFSEM 99 oer s invited talks exploring core technologies talks tracing the path from data to knowledge and those describing a wide variety of applications Therich collection of invited talks presents onetraditional facet of SOFSEM that of a winter school in which IT researchers and professionals get an opp tunity to see more of the large pasture of today s computing than just their favourite grazing corner To facilitate this purpose the prominent researchers delivering invited talks usually start with a broad overview of the state of the art in a wider area and then gradually focus on their particular subject

**Lua** Alexander Aronowitz, 2020-11-11 Definition Despite being a fast and

powerful programming language Lua is very easy to use and learn Programmers can easily embed this language into their

applications The basic purpose of Lua's development was the creation of an embeddable lightweight scripting language that can be used in a variety of programming activities such as web applications image processing and games History of LuaA team of 3 members namely Roberto Ierusalimschy Waldemar Celes and Luiz Henrique de Figueiredo Computer Graphics Technology Group Tecgraf created Lua in year 1993 at the Pontifical Catholic University of Rio de Janeiro The two core foundation stones that led towards the development of Lua were the data configuration and description languages namely data entry language DEL and Simple Object Language SOL Between the years 1992 and 1993 teams at Tecgraf independently developed these two languages for two different projects Both of these projects were developed at Petrobras Company and were graphical designing tools for engineering applications However SOL and DEL lacked flow control structures and Petrobras realised that there was need to add a full programming feature to these languages The design of Lua 1.0 was developed in a manner that enabled its object constructors which were a little bit different from the present time light weight and flexible object constructors The control structures syntax for Lua was taken from Modula to a great extent as it consisted of the repeat until if while loops Part from that the syntax was also influenced by a number of other languages these included CLU C SNOBOL and AWK The developers of Lua had stated in one of the articles that was published in Dr Dobb's Journal that the decision to use tables as the primary data structure for Lua has been influenced by LISP and Scheme This is because these languages had lists as their data structure mechanism which is single and global in nature Scheme has had increasing influence on the semantics of Lua with the passage of time This influence can be evidently seen with the inclusion of full lexical scoping and anonymous functions in the language The release of versions of Lua up till version 5.0 was made under a license that was similar to the BSD license Afterwards MIT license was used to make releases This was applicable from the release of version 5.0
