

Lab – Subnetting Network Topologies

Part 1: Network Topology A

In Part 1, you have been given the 192.168.10.0/24 network address to subnet, with the following topology. Determine the number of networks needed and then design an appropriate addressing scheme.

Step 1: Determine the number of subnets in Network Topology A.

a. How many subnets are there?

Subnet 1: PC-A, PC-B, Switch S1

Subnet2: link between R1 and R2

So, the total required subnet = 2

b. How many bits should you borrow to create the required number of subnets?

192.168.10.0/24 has a default subnet mask of 255.255.255.0 => 8 host bits are available

We have $2^n \geq \text{required subnets}$ so to create at least 2 subnets, we need to borrow at least 1 bit from the host portion. ($2^1 = 2$)

c. How many usable host addresses per subnet are in this addressing scheme?

The number of host addresses per subnet:

$$2^{(8-1)} - 2 = 128 - 2 = 126$$
