systems fully integrated with software have become essential enablers for both science and commerce. But current software methodologies, tools, and techniques are not robust or reliable enough for the demands of a constantly changing and evolving market, and many promising approaches have proved to be no more than case-oriented methods that are not fully automated. This book presents the proceedings of the 17th international conference on New Trends in Intelligent Software Methodology Tools and Techniques SoMeT18 held in Granada, Spain, 26-28 September 2018. The SoMeT conferences provide a forum for the exchange of ideas and experience, foster new directions in software development methodologies and related tools and techniques, and focus on exploring innovations, controversies, and the current challenges facing the software engineering community. The 80 selected papers included here are divided into 13 chapters and cover subjects as diverse as intelligent software systems, medical informatics, and bioinformatics, artificial intelligence techniques, social learning, software and sentiment analysis, cognitive systems, and neural analytics, and security among other things. Offering a state-of-the-art overview of methodologies, tools, and techniques, this book will be of interest to all those whose work involves the development or application of software.
