Static Load Balancing Algorithms In Cloud Computing:

Comparative Analysis of Load Balancing Algorithms in Cloud Computing Mohit Tomar, 2017 Abstract Cloud computing is a novel trend emerging in Information Technology IT environments with immense infrastructure and resources An integral aspect of cloud computing is load balancing Efficient load balancing in cloud computing ensures effective resource utilization There are two types of load balancers the static load balancer and the dynamic load balancer While both types of load balancers are widely used in the industry they differ in performance In this project the performances of the most widely used static and dynamic load balancers namely the round robin and the throttled are compared Specifically the project examines whether the throttled algorithm takes less time than the round robin algorithm to access data in cloud computing The results show that the throttled algorithm takes less time than the round robin algorithm to access data and that this difference is due to a faultiness in the implementation of the round robin algorithm Cloud Computing and Security Xingming

Vignesh Joshi,2020 Cloud computing plays an important role in enhancing the effective sharing of resources in virtual machines Scheduling and load balancing are the two common concepts that cloud computing relies on ensuring that a prescribed task is assigned to the most appropriate virtual machine Also cloud computing should have the ability to handle multiple independent tasks that are arriving and execute them in the same or multiple nodes In a heterogeneous environment static and dynamic scheduling plays an important role by enhancing the allocation of tasks to the appropriate resources to

satisfy the internet users requests and making cloud computing technology more efficient This work aims to evaluate and discuss important algorithms that will help improve the load balancing performance of cloud systems A Comparison of Select Load Balancing Algorithms in Cloud Computing Varsha Thakur,2015 This paper compares the performances of three algorithms with different service broker policies namely Round Robin Equally Spread Current Execution ESCE and Throttled Load Balancing CloudSim and CloudSim based tool are used for simulation The results reveal that Throttled load balancing algorithm with optimistic service broker policy is superior to others However from the cost point of view Round Robin under closest service broker policy is most cost effective due to little migration overheads A FRAMEWORK FOR SCALABLE DISTRIBUTED JOB PROCESSING WITH DYNAMIC LOAD BALANCING USING DECENTRALIZED APPROACH Dr P. SrinivasaRao,2017-12-30 A distributed system consists of many heterogeneous processors with different processing power and all processors are interconnected with a communication channel In such a system if some processors are less loaded or idle and others are heavily loaded the system performance will be reduced drastically System performance can be improved by using proper load balancing 1 4 The aim of load balancing is to improve the performance measures and reduce the overall completion time and cost **Comparative Study of Load Balancing Algorithms in Cloud Computing for Wired and Wireless Networks** Rasti Qasim Ali,2018 Cloud computing is emerging as a modern paradigm for the purpose of accessing manipulating and configuring large scale distributed applications through the Internet The load on the cloud is evolving with the development of new applications in parallel Load balancing algorithms improve the workload to be distributed equally across all nodes and prevents the situation in which some nodes become overloaded while others have the lowest load at the time when a request is made Performance parameters just like CPU utilization and Processing Delay have been studied in order to achieve a higher user satisfaction and resource allocation ratio and ensures that all computing applications perform the same amount of work in the equal time Load balancing is an ideal solution to evenly distribute the load across all the servers by using different types of load balancing algorithms The deployment of cloud computing raises so many challenge tasks such as resource management request handling in cloud environment and the most important one is how to balance load in cloud computing In this project in order to solve the problem of network congestions some load balancing algorithms have been used with the use of a load balancer in two types of technologies wired and wireless OPNET modeler has been used to examine the used load balancing algorithms for different scenarios Moreover the performance of some parameters has been obtained such as CPU utilization on both load balancer and the servers and the processing delay on the load balancer A deep analysis was conducted to investigate these parameters of performance and well studied comparison is achieved The numerical results proved that using a load balancer decreases the CPU utilization and load on the servers **Algorithms for Energy Efficient Load Balancing in Cloud Environments** Norman Peitek,2014-12-30 Seminar paper from the year 2013 in the subject Computer Science Commercial Information Technology grade 1 0 Otto von Guericke

University Magdeburg Faculty of Computer Science course Recent Topics in Business Informatics language English abstract Energy efficiency has a rising importance throughout society With the growth of large data centers the energy consumption becomes centralized and nowadays takes a significant amount of the overall electricity consumption of a country Load balancing algorithms are able to make an existing infrastructure more efficient without major drawbacks This structured literature research presents the state of the art technology regarding the load balancing approach to make data centers more energy efficient The state of the art approaches are reviewed for techniques improvements and consideration of performance effects

A Novel Approach To Enhance The Performance Of Cloud Computing File System Using Load Balancing Algorithm Pradheep Manisekaran,2015-02-19 Doctoral Thesis Dissertation from the year 2014 in the subject Computer Science IT Security Lovely Professional University Punjab Lovely Professional University Phagwara Punjab course M Tech Information Technology language English abstract Cloud computing is one of the biggest thing in computing in recent time Cloud computing uses the internet and the central remote servers to support different data and applications Cloud computing is that emerging technology which is used for providing various computing and storage services over the Internet In the cloud computing the internet is viewed as a cloud Internet users can receive services from a cloud as if they were employing a super computer which be using cloud computing To storing data in the cloud instead of on their own devices and it making ubiquitous data access possible Load balancing helps to make resource utilization effective and also used to improve the response time of the job The load balancing helps to remove the nodes which are unbalanced In this situation it removes the nodes which are overloaded or under loaded It is dynamic in nature In the cloud computing file system management is the big issue We use round robin algorithm with load balancing in the file systems It will help to enhance the performance of file system It also helps to increase the access of file systems in cloud computing

A Predictive Workload Balancing Algorithm in Cloud Services Mahdee Jodayree,2018 In today s business world many companies and government agencies depend on the infrastructures of cloud services to host and process their information Load processing of many cloud services is distributed in a static manner which can overload the largest available systems This paper is an exploratory study on the predictive approach for dynamic resource distribution of cloud services Today many cloud service providers are exploring the benefit of dynamic workload balancing for their resource management Rather than issuing fixed resources to each customer a dynamic hosting alternative offers a way to allocate resources dynamically and more efficiently to save computational power Efficient cloud resource management can be achieved by simulating cloud services based on the predictions of incoming workloads which can be more efficient than static allocation methods Wolke Bichler and Setzer 2015 Previous researchers in this area have focused on dynamic load balancing algorithms that are based on a current workload demanded by a client These approaches require high computational power and additional time to meet the demands of dynamic cloud services This paper introduces a rule based workload balancing algorithm based on the

predictions of an end to end system called Cicada A simulation of cloud services can be achieved by a cloud service simulator called CloudSim and it will be used to achieve an algorithm with lower computational demand and a faster workload balancing The final result will demonstrate the effectiveness of a predictive workload balancing approach that can achieve faster workload balancing with a lower computational power usage *Index to IEEE Publications* Institute of Electrical and Electronics Engineers,1990 Issues for 1973 cover the entire IEEE technical literature **International Aerospace Abstracts** ,1998 **Load Balancing and Rate Limiting Based Algorithms for Improving Cloud Computing Performance** Joseph Doyle,2012
