**Cognitive and Motor Skills in Sports** Sabine Schaefer, Karen Zentgraf, Kylie Ann Steel, 2025-08-28 The intersection of cognitive processes and motor skills in sports has garnered significant attention in the field of psychology. Understanding the intricate relationship between cognitive functioning and motor performance is crucial for enhancing athletic training performance and overall sports expertise. The advent of advanced technologies such as motion capture systems and neuroimaging techniques has provided researchers with valuable tools to investigate the cognitive and motor aspects of sports performance. This Research Topic aims to consolidate the latest research and advancements in the domain of cognitive and motor skills in sports. The objective of this Collection is to expand and consolidate the existing knowledge on cognitive and motor skills in sports with a specific emphasis on the aforementioned studies. By bringing together multidisciplinary perspectives, the aim is to deepen our understanding of the complex interplay between cognitive processes and motor skills in sports performance. Additionally, this special issue seeks to promote the development of innovative approaches and interventions for enhancing cognitive and motor skills in athletes.

New Approach Methods in Immunology Jeffrey John Bajramovic, Susan Gibbs, Emanuela Corsini, Thomas Hartung, 2024-09-27 Currently, the assessment of functional immunological relevance is mainly done in animal models. Motivation to work on non-animal methods or new approach methods (NAM) stems from economical and ethical considerations and is supported by public pressure. Importantly, the translational gap between results obtained in animal studies and clinical trials in humans, the valley of death, combined with the reproducibility crisis in science, also provides strong scientific arguments to work on novel, robust, human-based methodology. The field of immunology confronts NAM scientists with specific challenges. Firstly, immunological responses require several cell types in different locations for proper development and take considerable time to develop. Secondly, immunological responses in outbred humans are characterized by genetic and functional variability. Still, the development and application of NAM are increasing rapidly, and the field is moving at such a fast pace that a special issue is timely. Our goal is to provide an overview of the current state of the art regarding new approach methods or non-animal methods (NAM) in immunology. These should be inspired by the desire to mimic in vivo biology and describe e.g. challenges in mimicking immunological structures like lymph nodes, bone marrow, local immune structures, immunological responses, systemic and local innate and adaptive B cells and T cells, and/or immunological processes like maturation, trafficking, extravasation, immunotoxicity, affinity maturation.
