Distributed and Parallel Computing Michael Hobbs, Andrzej Goscinski, Wanlei Zhou, 2005-10-13 There are many applications that require parallel and distributed processing to allow complicated engineering business and research problems to be solved in a reasonable time Parallel and distributed processing is able to improve company profit lower costs of design production and deployment of new technologies and create better business environments The major lesson learned by car and aircraft engineers drug manufacturers genome researchers and other specialist is that a computer system is a very powerful tool that is able to help them solving even more complicated problems That has led computing specialists to new computer system architecture and exploiting parallel computers clusters of clusters and distributed systems in the form of grids There are also institutions that do not have so complicated problems but would like to improve profit lower costs of design and production by using parallel and distributed processing on clusters In general to achieve these goals parallel and distributed processing must become the computing mainstream This implies a need for new architectures of parallel and distributed systems new system management facilities and new application algorithms This also implies a need for better understanding of grids and clusters and in particular their operating systems scheduling algorithms load balancing heterogeneity transparency application deployment which is of the most critical importance for their development and taking them by industry and business

Grid and Cooperative Computing - GCC 2004 Hai Jin, Yi Pan, Nong Xiao, Jianhua Sun, 2004-09-29 Welcome to the proceedings of GCC2004 and the city of Wuhan Grid computing has become a mainstream research area in computer science and the GCC conference has become one of the premier forums for presentation of new and exciting research in all aspects of grid and cooperative computing The program committee is pleased to present the proceedings of the 3rd International Conference on Grid and Cooperative Computing GCC2004 which comprises a collection of excellent technical papers posters workshops and keynote speeches The papers accepted cover a wide range of exciting topics including resource grid and service grid information grid and knowledge grid grid monitoring management and organization tools grid portal grid service Web services and their QoS service orchestration grid middleware and toolkits software glue technologies grid security innovative grid applications advanced resource reservation and scheduling performance evaluation and modeling computer supported cooperative work P2P computing automatic computing and meta information management The conference continues to grow and this year a record total of 581 manuscripts including

workshop submissions were submitted for consideration Expecting this growth the size of the program committee was increased from 50 members for GCC 2003 for 70 in GCC 2004 Relevant differences from previous editions of the conference it is worth mentioning a significant increase in the number of papers submitted by authors from outside China and the acceptance rate was much lower than for previous GCC conferences From the 427 papers submitted to the main conference the program committee selected only 96 regular papers for oral presentation and 62 short papers for poster presentation in the program
