Parallel Architectures and Compilation Techniques Michel Cosnard, Guang R. Gao, Gabriel M. Silberman, 1994 Fine and medium grain parallelism continues to hold its own as a vital vibrant research topic Within the area new developments in superscalar and VLIW architectures and their associated compilation techniques have provided exciting new avenues to extract performance from a slowing technology curve Comprising 28 full length papers and a number of short poster papers this publication offers a high quality exploration of the current state of the art in the field It will be of particular interest to those involved in control structures and microprogramming processor architectures computer system implementation programming techniques and software engineering

Techniques for the Interactive Development of Numerical Linear Algebra Libraries for Scientific Computation Bret Andrew Marsolf, University of Illinois at Urbana-Champaign. Department of Computer Science, 1997 Abstract The development of high performance numerical algorithms and their effective use in application codes is an iterative process involving the refinement of the algorithms and their implementations that continues during the lifetime of the algorithm Knowledge and expertise from the areas of numerical analysis computer software compilers machine architecture and applications are required during the development To improve this process the FALCON environment was developed to combine the analysis techniques from restructuring compilers with the algebraic techniques from numerical analysis In this thesis interactive techniques that were developed to extend the FALCON environment are described These techniques allow the developer to improve the analysis of the algorithm to restructure the algorithm using transformation patterns to utilize additional information about structures within the data and to control the generation of the target code The experimental results show that the codes generated by

the interactive techniques have better performance than those generated automatically In addition the environment was extended to support the generation of C code When the C code generated by FALCON is compared to the code generated by other MATLAB translators the C code is typically faster However when compared against the Fortran 90 code generated by FALCON the C code is usually slower **ACM SIGPLAN Notices** ,2004-03 *The Journal of the Astronautical Sciences* ,1998 **Report CS-R** ,1984 **Computer Sciences** Roger R.
