Complex Valued Nonlinear Adaptive Filters Danilo P. Mandic, Vanessa Su Lee Goh, 2009-04-20 This book was written in response to the growing demand for a text that provides a unified treatment of linear and nonlinear complex valued adaptive filters and methods for the processing of general complex signals circular and noncircular It brings together adaptive filtering algorithms for feedforward transversal and feedback architectures and the recent developments in the statistics of complex variable under the powerful frameworks of CR Wirtinger calculus and augmented complex statistics This offers a number of theoretical performance gains which is illustrated on both stochastic gradient algorithms such as the augmented complex least mean square ACLMS and those based on Kalman filters This work is supported by a number of simulations using synthetic and real world data including the noncircular and intermittent radar and wind signals *Advances in*

Spectrum Analysis and Array Processing Simon S. Haykin, 1991 This is the second of a two volume set providing detailed discussion of fundamental issues in spectrum analysis and array processing detailed treatments of popular and new algorithms in these fields and coverage of applications relevant to them Adaptive Filter Theory Simon S. Haykin, 1996

Haykin examines both the mathematical theory behind various linear adaptive filters with finite duration impulse response FIR and the elements of supervised neural networks This edition has been updated and refined to keep current with the field and develop concepts in as unified and accessible a manner as possible It introduces a completely new chapter on Frequency Domain Adaptive Filters adds a chapter on Tracking Time Varying Systems adds two chapters on Neural Networks enhances material on RLS algorithms strengthens linkages to Kalman filter theory to gain a more unified treatment of the standard square root and order recursive forms and includes new computer experiments using MATLAB software that illustrate the underlying theory and applications of the LMS and RLS algorithms **Canadian Journal of Electrical and Computer**

Engineering, 1991 **Intelligent Signal Processing** Simon Haykin, Bart Kosko, 2001-01-15 IEEE Press is proud to present the first selected reprint volume devoted to the new field of intelligent signal processing ISP ISP differs fundamentally from the classical approach to statistical signal processing in that the input output behavior of a complex system is modeled by using intelligent or model free techniques rather than relying on the shortcomings of a mathematical model Information is extracted from incoming signal and noise data making few assumptions about the statistical structure of signals and their environment Intelligent Signal Processing explores how ISP tools address the problems of practical neural systems new signal data and blind fuzzy approximators The editors have compiled 20 articles written by prominent researchers covering 15 diverse practical applications of this nascent topic exposing the reader to the signal processing power of learning and adaptive systems This essential reference is intended for researchers professional engineers and scientists working in statistical signal processing and its applications in various fields such as humanistic intelligence stochastic resonance

financial markets optimization pattern recognition signal detection speech processing and sensor fusion Intelligent Signal Processing is also invaluable for graduate students and academics with a background in computer science computer engineering or electrical engineering About the Editors Simon Haykin is the founding director of the Communications Research Laboratory at McMaster University Hamilton Ontario Canada where he serves as university professor His research interests include nonlinear dynamics neural networks and adaptive filters and their applications in radar and communications systems Dr Haykin is the editor for a series of books on Adaptive and Learning Systems for Signal Processing Communications and Control Publisher and is both an IEEE Fellow and Fellow of the Royal Society of Canada Bart Kosko is a past director of the University of Southern California s USC Signal and Image Processing Institute He has authored several books including Neural Networks and Fuzzy Systems Neural Networks for Signal Processing Publisher copyright date and Fuzzy Thinking Publisher copyright date as well as the novel Nanotime Publisher copyright date Dr Kosko is an elected governor of the International Neural Network Society and has chaired many neural and fuzzy system conferences Currently he is associate professor of electrical engineering at USC

Blind Deconvolution Simon S. Haykin,1994 This book is devoted to the study of the blind deconvolution problem where it is impractical to assume the availability of the system input It considers a variety of blind deconvolution equalization algorithms with computer simulation experiments to support the theory

New Directions in Statistical Signal Processing Simon S. Haykin,2007 Leading researchers in signal processing and neural computation present work aimed at promoting the interaction and cross fertilization between the two fields Signal processing and neural computation have separately and significantly influenced many disciplines but the cross fertilization of the two fields has begun only recently Research now shows that each has much to teach the other as we see highly sophisticated kinds of signal processing and elaborate hierachical levels of neural computation performed side by side in the brain In New Directions in Statistical Signal Processing leading researchers from both signal processing and neural computation present new work that aims to promote interaction between the two disciplines The book s 14 chapters almost evenly divided between signal processing and neural computation begin with the brain and move on to communication signal processing and learning systems They examine such topics as how computational models help us understand the brain s information processing how an intelligent machine could solve the cocktail party problem with active audition in a noisy environment graphical and network structure modeling approaches uncertainty in network communications the geometric approach to blind signal processing game theoretic learning algorithms and observable operator models OOMs as an alternative to hidden Markov models HMMs

Bayesian Signal Processing James V. Candy, 2011-09-20 New Bayesian approach helps you solve tough problems in signal processing with ease Signal processing is based on this fundamental concept the extraction of critical information from noisy uncertain data Most techniques rely on underlying Gaussian assumptions for a solution but what happens when these assumptions are erroneous Bayesian techniques circumvent this limitation by offering a completely different approach that can easily incorporate non Gaussian and nonlinear processes along with all of the usual methods currently available This text enables readers to fully exploit the many advantages of the Bayesian approach to model based signal processing It clearly demonstrates the features of this powerful approach compared to the pure statistical methods found in other texts Readers will discover how easily and effectively the Bayesian approach coupled with the hierarchy of physics based models developed throughout can be applied to signal processing problems that previously seemed unsolvable Bayesian Signal Processing features the latest generation of processors particle filters that have been enabled by the advent of high speed high throughput computers The Bayesian approach is uniformly developed in this book s algorithms examples applications and case studies Throughout this book the emphasis is on nonlinear non Gaussian problems however some classical techniques e g Kalman filters unscented Kalman filters Gaussian sums grid based filters et al are included to enable readers familiar with those methods to draw parallels between the two approaches Special features include Unified Bayesian treatment starting from the basics Bayes s rule to the more advanced Monte Carlo sampling evolving to the next generation techniques sequential Monte Carlo sampling Incorporates classical Kalman filtering for linear linearized and nonlinear systems modern unscented Kalman filters and the next generation Bayesian particle filters Examples illustrate how theory can be applied directly to a variety of processing problems Case studies demonstrate how the Bayesian approach solves real world problems in practice MATLAB notes at the end of each chapter help readers solve complex problems using readily available software commands and point out software packages available Problem sets test readers knowledge and help them put their new skills

into practice The basic Bayesian approach is emphasized throughout this text in order to enable the processor to rethink the approach to formulating and solving signal processing problems from the Bayesian perspective This text brings readers from the classical methods of model based signal processing to the next generation of processors that will clearly dominate the future of signal processing for years to come With its many illustrations demonstrating the applicability of the Bayesian approach to real world problems in signal processing this text is essential for all students scientists and engineers who investigate and apply signal processing to their everyday problems
