Series American Institute of Chemical Engineers, 1998 **Advances in Chemical Engineering**, 1992-09-08 Advances in Chemical Engineering Nonlinear Programming Lorenz T. Biegler, 2010-01-01 This book addresses modern nonlinear programming NLP concepts and algorithms especially as they apply to challenging applications in chemical process engineering The author provides a firm grounding in fundamental NLP properties and algorithms and relates them to real world problem classes in process optimization thus making the material understandable and useful to chemical engineers and experts in mathematical optimization **Chemical Process Control 2** Engineering Foundation (U.S.).

Conference, 1982 **CJChE**, 1999-02 Process Control and Management P.L. Lee, R.B. Newell, I.T. Cameron, 1998 The purpose of this book is to provide a balanced introduction to process control and management aimed at the general process engineer Rapid changes have occurred in process control over the past decade mainly because of the deployment of robust and effective digital control equipment and the development of the models which underpin the area Historically process control was seen as simply the maintenance of particular process variables at appropriate setpoints This very narrow view has been superseded by the view that process control involves the regulation of any given process in the context of a complete processing plant to maximise the economic return from the plant This wider definition brings into play a range of control regimes from basic regulatory control through advanced regulatory control to complex process management The

organization of the book reflects this hierarchy and is thus split into 3 parts covering basic regulatory control advanced process control and finally process management The book is completed by the inclusion of several useful appendices covering mathematical modelling process optimisation and simulation *Computer-oriented Process Engineering* L. Puigjaner, A. Espuña, 1991 The proceedings of COPE 91 represent the continuing effort of both the scientific and industrial community to make known what is new in research and development in the increasingly important interdisciplinary field of computers in chemical engineering The symposium focussed on the following topics Artificial Intelligence in Chemical Engineering Computer Integrated Process Engineering Reliability and Risk Assessment Process Design under Uncertainty Education and Training in Computer Applications The theoretical and practical aspects of the use of computers in chemical engineering covered in this book should find wide use in libraries and research facilities and should have a direct impact in the chemical industry particularly in production automation utility networks and computer integrated process engineering

Dynamic Process Modeling, 2010-12-06 Inspired by the leading authority in the field the Centre for Process Systems Engineering at Imperial College London this book includes theoretical developments algorithms methodologies and tools in process systems engineering and applications from the chemical energy molecular biomedical and other areas It spans a whole range of length scales seen in manufacturing industries from molecular and nanoscale phenomena to enterprise wide optimization and control As such this will appeal to a broad readership since the topic applies not only to all technical processes but also due to the interdisciplinary expertise required to solve the challenge The ultimate reference work for years to come **Analysis and Optimization of Systems** Alain Bensoussan, Jacques-Louis Lions, 1984 **Foundations of Computer-aided Process Design** Jeffrey J.
