the material presented in the other chapters These chapters appear when all the relevant material required for writing the program has been thoroughly discussed in the preceding chapters Each of the five chapters starts by describing the problem in narrative form The chapter then gives a detailed definition of the functionality required Next the chapter explains how the functionality can be implemented using the object oriented concepts presented earlier in the book The chapter ends with a complete working Java program that solves the problem described Often alternative solutions are presented so that readers will be aware that there are competing ways to implement an object oriented program with different trade offs Another unique feature of the book is that that new material is not used or referenced before it has been discussed The book is essentially incremental in nature so that new concepts being introduced always build on earlier concepts Thus readers are only exposed to new concepts or language features when pre requisite material has been completely discussed Also great care has been taken to avoid the use of programming language features which though very useful for advanced programmers can make it harder for a beginner to focus on and learn the object oriented principles being imparted This book is based on the experience gained from many years of teaching object oriented programming to beginners who know another programming language It is likely to benefit readers who are looking for a good practical introduction to object oriented programming in Java in an easy to understand format
