AppleScript in a Nutshell Bruce W. Perry, 2001

Mac OS X for Unix Geeks Brian Jepson, Ernest E. Rothman, 2002-09-30 If you're one of the many Unix developers drawn to Mac OS X for its BSD core you'll find yourself in surprisingly unfamiliar territory. Even if you're an experienced Mac user, Mac OS X is unlike earlier Macs and it's radically different from the Unix you've used before too. Enter *Mac OS X for Unix Geeks* by Brian Jepson and Ernest E. Rothman, two Unix geeks who found themselves in the same place you are. Their new book is your guide to figuring out the BSD Unix system and Mac-specific components that are making your life difficult and to help ease you into the Unix inside Mac OS X. This concise book includes such topics as: A quick overview of the Terminal application; Understanding Open Directory LDAP and NetInfo; Issues related to using the GNU C Compiler 9GCC; Library linking and porting Unix software; An overview of Mac OS X's filesystem and startup processes; Creating and installing packages using Fink; Building the Darwin kernel; Running X Windows on top of Mac OS X. The book wraps up with a quick manpage-style reference to the Missing Manual Pages commands that come with Mac OS X, although there are no manpages. If you find yourself disoriented by the new Mac environment, *Mac OS X for Unix Geeks* can help you acclimate yourself quickly to the familiar yet foreign Unix landscape.

Mac OS X for Java Geeks Will Iverson, 2003-04-24 *Mac OS X for Java Geeks* delivers a complete and detailed look at the Mac OS X platform geared specifically at Java developers. Programmers using the 10.2 Jaguar release of Mac OS X and the new JDK 1.4 have unprecedented new functionality available to them. Whether you are a Java newbie working your way through Java Swing and classpath issues or you are a Java guru comfortable with digital media reflection and J2EE, this book will teach you how to get around on Mac OS X. You'll also get the latest information on how to build applications that run seamlessly and identically on Windows, Linux, Unix, and the Mac. The book begins by laying out the Mac OS X tool set from the included Java Runtime Environment to third-party tools, IDEs, and Jakarta Ant. You'll then be brought up to speed on the advanced Mac-specific extensions to Java, including the spelling framework, speech framework, and integration with QuickTime. In addition to clear explanations of these extensions, you'll learn how to write code that falls back to non-Mac-specific code when it runs on other platforms, keeping your application portable. Once you have the fundamentals of the Mac OS X Java platform in hand, this book takes you beyond the basics. You'll learn how to get the Apache web server running and supplement it with the Jakarta Tomcat JSP and servlet container. JSPs and servlets running on Mac OS X are covered, as is installation and connectivity to a database. Once you have your web applications up and running, you'll learn how to interface them with EJBs, as running the JBoss application server on Mac OS X is covered. Finally, the latest developments in web services, including XML RPC and SOAP, are found within.

different parts of an enterprise application Messaging clients work by sending messages to a message server which is responsible for delivering the messages to their destination Message delivery is asynchronous meaning that the client can continue working without waiting for the message to be delivered The contents of the message can be anything from a simple text string to a serialized Java object or an XML document Java Message Service shows how to build applications using the point to point and publish and subscribe models how to use features like transactions and durable subscriptions to make an application reliable and how to use messaging within Enterprise JavaBeans It also introduces a new EJB type the MessageDrivenBean that is part of EJB 2.0 and discusses integration of messaging into J2EE
