on experience of solving data science problems using Python describes techniques and tools for statistical analysis machine learning graph analysis and parallel programming reviews a range of applications of data science including recommender systems and sentiment analysis of text data provides supplementary code resources and data at an associated website

Introduction to Econophysics Carlo Requião da Cunha, 2021-10-28 Econophysics explores the parallels between physics and economics and is an exciting topic that is attracting increasing attention However there is a lack of literature that explains the topic from a broad perspective This book introduces advanced undergraduates and graduate students in physics and engineering to the topic from this outlook and is accompanied by rigorous mathematics which ensures that this will also be a good guide for established researchers in the field as well as researchers from other fields such as mathematics and statistics who are interested in the topic Key features Presents a multidisciplinary approach that will be of interest to students and researchers from physics engineering mathematics statistics and other physical sciences Accompanied by Python code with further learning opportunities available for readers to download from the CRC Press website Accessible to both students and researchers Carlo R da Cunha is an associate professor of physics and engineering physics at the Universidade Federal do Rio Grande do Sul Brazil and has been since 2011 Dr da Cunha received his M Sc Degree from the West Virginia University in 2001 and his Ph D degree from Arizona State University in 2005 He was a postdoctoral researcher at McGill University in Canada in 2006 and an assistant professor of engineering at the University Federal de Santa Catarina between 2007 and 2011 He has been a guest professor at the Technische Universität Wien Austria Chiba University Japan and Arizona State University US His research revolves around the physics of complex systems where he has been drawing parallels between physical and economic systems from quantum to social levels To access additional resources such as python code please take a look here

The Effect Nick Huntington-Klein, 2025-07-09 The Effect An Introduction to Research Design and Causality Second edition is an excellent teaching text about research design specifically concerning research that uses observational data to make a causal inference It is separated into two halves each with different approaches to that subject The first half goes through the concepts of causality with very little in the way of estimation It introduces the concept of identification thoroughly and clearly and discusses it as a process of trying to isolate variation that has a causal interpretation Subjects include heavy emphasis on data generating processes and causal diagrams Concepts are demonstrated with a heavy emphasis on graphical intuition and the question of what we do to data When we add a control variable what does that actually do The target audience is practitioners as well as undergraduate and graduate students studying causal inference in various fields such as statistics econometrics biostatistics the social sciences and data science Key Features Extensive code examples in R Stata and Python Chapters on heterogeneous treatment effects simulation and power analysis new cutting edge methods and uncomfortable ignored assumptions An easy to read conversational tone Up to date coverage of methods with fast moving literatures like difference in differences The second edition features a new

chapter on partial identification updated materials methods and writing throughout and additional materials for help navigating the book or in using the book in teaching [Introduction to Data Science](#) Laura Igual,Santi Seguí,2024-04-12 This accessible and classroom tested textbook reference presents an introduction to the fundamentals of the interdisciplinary field of data science The coverage spans key concepts from statistics machine deep learning and responsible data science useful techniques for network analysis and natural language processing and practical applications of data science such as recommender systems or sentiment analysis Topics and features Provides numerous practical case studies using real world data throughout the book Supports understanding through hands on experience of solving data science problems using Python Describes concepts techniques and tools for statistical analysis machine learning graph analysis natural language processing deep learning and responsible data science Reviews a range of applications of data science including recommender systems and sentiment analysis of text data Provides supplementary code resources and data at an associated website This practically focused textbook provides an ideal introduction to the field for upper tier undergraduate and beginning graduate students from computer science mathematics statistics and other technical disciplines The work is also eminently suitable for professionals on continuous education short courses and to researchers following self study courses
