*A Computation Study on Start Procedures, Basis Change Criteria, and Solution Algorithms for Transportation Problems* Fred Glover, 1972 The paper presents an in depth computational comparison of the basic solution algorithms for solving transportation problems The comparison is performed using state of the art computer codes for the dual simplex transportation method the out of kilter method and the primal simplex transportation method often referred to as the Row Column Sum Method or MODI method In addition these codes are compared against a state of the art large scale LP code OPHELIE LP The study discloses that the most efficient solution procedure arises by coupling a primal transportation algorithm embodying recently developed methods for accelerating the determination of basis trees and dual evaluators with a version of the Row Minimum start rule and a modified row first negative evaluator rule The resulting method has been found to be at least 100 times faster than OPHELIE and 6 times faster than a streamlined version of the SHARE out of kilter code The method s median solution time for solving 1000 x 1000 transportation problems on a CDC 6600 computer is 17 seconds with a range of 14 to 22 seconds Author      *Mathematical Economics and Operations Research* Joseph Zaremba, 1978      Proceedings of the Summer Computer Simulation Conference ,1996      *Multiple Criteria Analysis* Peter Nijkamp, Jaap Spronk, 1981      *The Dhaka University Journal of Science* ,2010      **Proceedings of the Joint Automatic Control Conference** ,1980
