

B. Learning LabVIEW

A version of the Stop Light VI that uses an Event Structure. Data is passed from the Event Structure via Notifiers and Queues.

- Note that the Stop Boolean Notifier in the Light Control while Loop performs double duty. It has a 25ms timeout, so no Wait function is necessary.
- The use of a Variant is notable in that only attributes are passed. This provides a degree of freedom in not requiring data to be predefined.
