today's world The different approaches to machine learning including unsupervised supervised reinforcement learning method semi supervised machine learning and many others The concept of big data analysis including what is big data why big data is important the application of big data in today's world as well as the different data analysis tools that you can use The link between big data and machine learning The different machine learning algorithms including what machine learning algorithms are and how and when the different learning algorithms are used The concept of artificial neural networks including how they work when to use neural networks and more How decision trees are used in machine learning including what decision trees are in respect to machine learning how they work how the decision tree is read the different nodes in decision trees and when to use them The ins and outs of linear and logistic regression in machine learning including what linear regression is different types of regression how linear regression works how linear regression is used and much more And much more Even if this is your first encounter with the concept of machine learning this book will uncover everything you need to know to master machine learning and possibly get started in this field of advanced computing knowing very well what you are venturing into And the good thing is that the book takes a beginner friendly approach to help you to apply what you learn right away Would You Like To Know More Click Buy Now With 1 Click or Buy Now to get started [Machine Learning for Beginners](#) William J Ford,2020-02-18 You Are About To Start Your Journey To Understanding Machine Learning Like The Back Of Your Hand And Use It To Your Advantage If you've always wanted to learn how computers are able to perform some complex things like suggesting which products to buy to different customers depending on their buying behavior and much more but you've never pictured yourself enrolling in a computer science class to study everything from scratch then keep reading Are you already tired about your business poor performance or your limited ability to take advantage of modern technology to make your life easier because you don't understand the technology that every other successful person around you is leveraging every day Have you tried using pre built computer software to optimize your business but you never get the output you desire Do you want to stop spending too much money on tech experts to assist you with tasks that you can do yourself with a little effort to learn and increase efficiency If so then you've come to the right place You see having a successful online business or improving your knowledge about computer systems as regards to making accurate predictions for whatever goal doesn't have to be difficult even if you are not ready to enroll for a computer science or IT course In fact it's easier than you think One article published in Elite Data Science proves that machine learning can help us lead happier and healthier lives especially with the recent breakthroughs in deep learning that involves imitation of brain neurons Another one published in Analytics Training asserts that learning machine learning is one of the best ways to guarantee success in many areas of the modern world including business Another article in Towards Data Science asserts that employing machine learning in manufacturing is the best way to improve efficiency save money and time That means that understanding machine learning that tiny part of Artificial intelligence can impact your daily life and businesses greatly

The question is Where do you even start How do you build your understanding of machine learning to a point where you can start using it to make your life better What are the critical things you need to learn about machine learning to get started as a beginner What areas of your life can you apply your knowledge of machine learning If you have these and other related questions this book is for you so keep reading Here s just a tiny fraction of what you ll discover in this book The history of machine learning What machine learning can do for your business The machine learning algorithms How to develop a machine learning model from start to finish How neural networks work in machine learning The auto encoders What you need to know about EM algorithm and how it is applied Logistic regression for machine learning The theory and setup in deep learning with tensorflow Natural language processing Data cleansing and much much more Take a second to imagine how you d feel understanding how to can control a computer system to deliver output as you desire without hiring an expert or at least understanding how computers make predictions If you really want to find out how life would be once you know how to harness the power of modern technology to do anything you want even if you are a complete beginner Scroll up and click Buy Now With 1 Click or Buy Now to get started [Python Machine Learning](#) Oliver Soranson,2019-11-07 You must have gotten the opportunity to pay for parking at a mall where a machine is able to tell the amount of money you owe depending on how long your car was in the parking lot and probably a few other features However have you ever wondered just how the parking meter is able to differentiate between currencies and give you the right change Furthermore have you ever wondered how applications such as Uber can predict the amount of time it will take you to get home to such a high degree of accuracy yet traffic can be so unpredictable If you have ever asked yourself questions about the basic or especially the complex predictions and conclusions machines are making these days then your answer lies in Machine learning Human beings have different ways in which they learn some of the methods including experience or even having someone teach them Therefore to try to make machines even more useful to human beings it is possible to teach machines to make decisions in several ways and these can learn and have faster and more accurate output compared to how a human being would compete People usually understand the concept of how a machine will do something you have programmed it to do because people came to terms with that years ago However what still fascinates people is how a machine is able to make decisions independently by considering a situation and even making a prediction that turns out to be true Machine learning is at a very high level today when you compare to a few years back so that would make you wonder just how advanced machines will be in the next 20 to 30 years It is highly likely that machines will become better versions of us but we hope they will never get so independent and intelligent that they eventually decide to rule over us The objective of writing this book is to help a beginner to understand the basics of machine learning to the point of even training a machine to carry out some functions This book also explains the advantages associated with using Python since an individual does not necessarily have to be an expert coder to start using it Some of the main topics discussed in this book include The history of machine learning Key machine learning
