Bad to the Bone Steven Barrett, Jason Kridner, 2022-06-01 BeagleBone Black is a low cost open hardware
computer uniquely suited to interact with sensors and actuators directly and over the Web Introduced in April 2013 by
BeagleBoard.org a community of developers first established in early 2008 BeagleBone Black is used frequently to build
vision enabled robots home automation systems artistic lighting systems and countless other do it yourself and professional
projects BeagleBone variants include the original BeagleBone and the newer BeagleBone Black both hosting a powerful 32
bit super scalar ARM Cortex A8 processor capable of running numerous mobile and desktop capable operating systems
typically variants of Linux including Debian Android and Ubuntu Yet BeagleBone is small enough to fit in a small mint tin box
The Bone may be used in a wide variety of projects from middle school science fair projects to senior design projects to first
prototypes of very complex systems Novice users may access the power of the Bone through the user friendly BoneScript
software experienced through a Web browser in most major operating systems including Microsoft Windows Apple Mac OS X
or the Linux operating systems Seasoned users may take full advantage of the Bone's power using the underlying Linux
based operating system a host of feature extension boards Capes and a wide variety of Linux community open source
libraries This book provides an introduction to this powerful computer and has been designed for a wide variety of users
including the first time novice through the seasoned embedded system design professional The book contains background
theory on system operation coupled with many well documented illustrative examples Examples for novice users are centered
on motivational fun robot projects while advanced projects follow the theme of assistive technology and image processing
applications
