Java Concurrent Programming Henry H. Liu,2015-07-05 Java is one of the most popular programming languages for developing software applications especially cloud computing big data analytics and various commonly used enterprise applications Applications in these areas require high performance and scalability driving unprecedented high demands for skills in Java concurrent programming Whether you are a beginner or an experienced Java developer it is desirable to keep sharpening your Java programming skills with a systematic understanding of the power and flexibility that the modern Java concurrent programming frameworks offer This book attempts to provide an easier entry into Java concurrent programming for those who are passionate about programming especially for those who are motivated and determined to develop high performance and scalable Java software Specifically this book covers the following subjects Chapter 1 Multithreaded Programming in Java Chapter 2 Java ExecutorService Framework Chapter 3 Java Collections Framework Chapter 4 Atomic Operations Chapter 5 Locks Chapter 6 Synchronizers Chapter 7 Synchronized Collections Chapter 8 Parallel Programming Using the Fork Join Framework Appendix A Algorithm Analysis Appendix B The Bridge Exercise To minimize the possibilities of any kind of misperceptions and misunderstandings this text emphasizes understanding how various classes are actually implemented internally accompanied with carefully crafted examples A great additional benefit out of this approach is that it gives all of us an opportunity to appreciate how those masters coded all of those classes that we use every day for our Java concurrent programming tasks This book will not only enhance your Java concurrent programming skills specifically but also Java programming skills in general In addition you will learn how to judge properly on whether threads are running normally or in an undesirable livelock or starvation or deadlock situation

Concurrent and Real-Time Programming in Java Andrew J. Wellings,Wellings Andrew,2004 Real time functionality is essential for developing many consumer industrial and systems devices While the C C programming language is most often

used in the creation of real time software the Java language with its simple and familiar object oriented programming model offers many advantages over current real time practices Concurrent and Real Time Programming in Java covers the motivations for and semantics of the extensions and modifications to the Java programming environment that enable the Java platform Virtual Machine to meet the requirements and constraints of real time development Key aspects of concurrent and real time programming and how they are implemented in Java are discussed such as concurrency memory management real time scheduling and real time resource sharing
