Composite Materials Composition Properties:

Production, Properties, and Applications of Engineered Cementitious Composites Praveenkumar, S., Davim, J. Paulo, 2024-04-19 Engineered cementitious composites ECC is a new type of fiber reinforced bendable cementitious composite that is used in various civil engineering applications instead of conventional and fiber reinforced concrete due to its high mechanical and durable properties In the macro and micro mechanic systems of ECC the incorporation of different materials plays a vital role in enhancing the properties of ECC Conventional concrete and fiber reinforced concrete have a brittle nature and crack easily under environmental and mechanical loads affecting the durability of structures The usage of alternative materials in the ECC modifies the brittle nature and offers environmentally sustainable construction with low embodied energy and a negative carbon footprint Production Properties and Applications of Engineered Cementitious Composites highlights the new and innovative ways of production properties and various applications of engineered cementitious composites The main focus of the book is on the latest advancements technical knowledge tools and solutions for engineered cementitious composites manufacturing design and technologies for construction from various perspectives Covering key topics such as alternative materials mineral admixtures and testing of engineered cementitious composites this premier reference source is ideal for engineers industry professionals researchers academicians scholars practitioners instructors and students

Numerical Simulation of Mechanical Behavior of Composite Materials Sergio Oller, 2014-09-04 An original mechanical formulation to treat nonlinear orthotropic behavior of composite materials is presented in this book It also examines different formulations that allow us to evaluate the behavior of composite materials through the composition of its components obtaining a new composite material Also two multiple scale homogenization methods are given one based on the analytical study of the cells Ad hoc homogenization and other one more general based on the finite element procedure applied on the macro scale upper scale and in the micro scale sub scale A very general formulation to simulate the mechanical behavior for traditional composite structures plywood reinforced concrete masonry etc as well as the new composite materials reinforced with long and short fibers nanotubes etc are also shown in this work Typical phenomena occurring in composite materials are also described in this work including fiber matrix debonding local buckling of fibers and its coupling with the overall buckling of the structure Finally several numerical examples that evaluates the qualities and capabilities of the general model formulated are offered in this book This book is intended for graduate engineering students who want to expand their knowledge of composite structures behavior *Publications of the National Bureau of Standards* United States.
