**Seismic Performance of Soil-Foundation-Structure Systems** Nawawi Chouw, Rolando P. Orense, Tam Larkin, 2017-08-25 Seismic Performance of Soil Foundation Structure Systems presents invited papers presented at the international workshop University of Auckland New Zealand 21 22 November 2016 This international workshop brought together outstanding work in earthquake engineering that embraces a holistic consideration of soil foundation structure systems For example the diversity of papers in this volume is represented by contributions from the fields of shallow foundation in liquefiable soil spatially distributed lifelines bridges clustered structures see photo on front cover sea floor seismic motion multi axial ground excitation deep foundations soil foundation structure fluid interaction liquefaction induced settlement and uplift with SFSI A fundamental knowledge gap is manifested by the isolated manner geotechnical and structural engineers work A holistic consideration of soil foundation structures systems is only possible if civil engineers work collaboratively to the mutual benefit of all disciplines Another gap occurs by the retarded application of up to date research findings in engineering design practices Seismic Performance of Soil Foundation Structure Systems is the outcome from the recognized need to close this gap since it has been observed that a considerable delay exists between published research findings and application of the principles revealed by the research Seismic Performance of Soil Foundation Structure Systems will be helpful in developing more understanding of the complex nature of responses these systems present under strong earthquakes and will assist engineers in closing the gaps identified above

**Applications in Geomechanics** Carlos A. Brebbia, 2012-12-06 The first volume of this series dealt with the Basic Principles of Boundary Elements while the second concentrated on time dependent problems and Volume three on the Computational Aspects of the method This volume studies the applications of the method to a wide variety of geomechanics problems most of which are ideally suited for boundary elements demonstrating the potentiality of the technique Chapter 1 deals with the application of BEM to three dimensional elastodynamics soil structure interaction problems It presents detailed formulations for rigid massless foundations of arbitrary shape both in the frequency and time domains The foundations are assumed to be resting on a

linearly elastic homogeneous isotropic half space and be subjected to externally applied loads on obliquely incident body The chapter reviews the major advances in soil foundation interaction presents a series of numerical results and stresses the practical application of BEM pointing out the high accuracy and efficiency of the technique even when using coarse mesh discretizations
