Wastewater Treatment: Concepts And Design Approach R. A. Christian, 2006 *Handbook of Research on Resource Management for Pollution and Waste Treatment* Affam, Augustine Chioma, Ezechi, Ezerie Henry, 2019-10-25 It is necessary to understand the extent of pollution in the environment in terms of the air water and soil in order for both humans and animals to live healthier lives Poor waste treatment or pollution monitoring can lead to massive environmental issues such as diminishing valuable resources and cause a significant negative impact on society Solutions such as reuse of waste and sustainable waste management must be explored to prevent these adverse effects The Handbook of Research on Resource Management for Pollution and Waste Treatment is a collection of innovative research that examines waste and pollution treatment methods that can be adopted at local and international levels and examines appropriate resource management strategies for environmentally related issues Featuring coverage on a wide range of topics such as soil washing bioremediation and runoff handling this book is ideally designed for environmentalists engineers waste management professionals natural resource regulators environmental policymakers scientists academicians researchers and students seeking current research on viable resource management methods for the regeneration of their immediate environment

Novel Concepts, Systems and Technology for Sludge Management in Emergency and Slum Settings Peter Mawioo, 2020-02-07 Management of sludge is one of the most pressing issues in sanitation provision The situation is especially complex when large quantities of fresh sludge containing various contaminants are generated in onsite sanitation systems in urban slums emergency settlements and wastewater treatment facilities that require proper disposal of the sludge The application of fast and efficient sludge management methods is important under these conditions This study focused on the development of an innovative sludge treatment unit that is based on the microwave irradiation technology The technology provides a rapid and efficient option for sludge treatment in isolated conditions such as slum emergency and similar situations The microwave based technology forms part of the eSOS emergency sanitation operation system concept that promotes an integrated sanitation approach in which all components of the entire sanitation chain are planned holistically Besides the study addresses the deficiencies associated with the poor choice of emergency sanitation technology options by proposing a methodology that is based on compensatory multi criteria analysis This study contributes in providing solutions towards improved sanitation in complex scenarios especially the management of faecal sludge in emergency and slum conditions *Biochemical and Environmental Bioprocessing* M Jerold, V Sivasubramanian, 2019-07-25 The rapid growth of industries has resulted in the generation of high volume of solid and liquid waste Today there is a need of Clean and Green technology for the sustainable waste management Biochemical and Environmental Bioprocessing Challenges and Developments explore the State of art green technologies to manage the waste and to recover value added products Microbes play an important role in the bioremediation Bioprocess engineering an interdisciplinary connects the Science and

Technology The bioconversion and bioremediation is essentially required for the management of various hazardous substances in the environment This book will give an intensive knowledge on the application of Biochemical and Bioprocess technologies for the eco friendly management of pollution This book serves as a fundamental to the students researchers academicians and Engineers working in the area of Environmental Bioremediation and in the exploration of various bioproducts from waste Features Reviews various biological methods for the treatment of effluents from Industries by using biomass and biopolymers Highlights the applications of various bioreactors like Anaerobic Sequential Batch Reactor Continuously stirred anaerobic digester Up flow anaerobic sludge blanket reactor Fluidized and expanded bed reactors Presents the cultivation of algae in Open Pond Closed loop System and Photo bioreactors for bioenergy production Discusses the intensified and integrated biorefinery approach by Microwave Irradiation Pyrolysis Acoustic cavitation Hydrodynamic cavitation Electron beam irradiation High pressure Autoclave reactor Steam explosion and photochemical oxidation Outlines the usage of microbial fuel cell MFC for the production bioelectricity generation in different modules Tubular MFC Stacked MFC Separate electrode modules Cutting edge research of synthesis of biogenic nanoparticles and Pigments by green route for the health care and environment management
