Modeling A Pv Diesel Battery Power System An Optimal:

Modeling and Simulation of Smart Grid Integrated with Hybrid Renewable Energy Systems Mohamed Abdelaziz Mohamed, Ali Mohamed Eltamaly, 2017-08-03 This book presents a comprehensive definition of smart grids and their benefits and compares smart and traditional grids It also introduces a design methodology for stand alone hybrid renewable energy system with and without applying the smart grid concepts for comparison purposes It discusses using renewable energy power plants to feed loads in remote areas as well as in central power plants connected to electric utilities Smart grid concepts used in the design of the hybrid renewable power systems can reduce the size of components which can be translated to a reduction in the cost of generated energy The proposed hybrid renewable energy system includes wind photovoltaic battery and diesel and is used initially to feed certain loads covering the load required completely The book introduces a novel methodology taking the smart grid concept into account by dividing the loads into high and low priority parts The high priority part should be supplied at any generated conditions However the low priority loads can be shifted to the time when the generated energy from renewable energy sources is greater than the high priority loads requirements The results show that the use of this smart grid concept reduces the component size and the cost of generated energy compared to that without dividing the loads The book also describes the use of smart optimization techniques like particle swarm optimization PSO and genetic algorithm GA to optimally design the hybrid renewable energy system This book provides an excellent background to renewable energy sources optimal sizing and locating of hybrid renewable energy sources the best optimization methodologies for sizing and designing the components of hybrid renewable energy systems and offers insights into using smart grid concepts in the system s design and sizing It also helps readers understand the dispatch methodology and how to connect the system s different components their modeling and the cost analysis of the system Modelling and Optimization of Photovoltaic Cells, Modules, and Systems Carlos David Rodríguez Gallegos, 2021-04-28 This book presents a study to determine the current limitations in the area of Photovoltaics PV as a source of renewable energy and proposes strategies to overcome them by applying optimization approaches in three main areas namely related to photovoltaic solar cells modules and systems These include grid metallization design of Si based solar cells and modules cost effectiveness analysis between Si based monofacial and bifacial grid connected PV systems optimal diesel replacement strategy for the progressive introduction of PV and batteries dispatch strategy optimization for PV hybrid systems in real time The novelty of the work presented in this book is of high interest to the scientific community but also to the PV manufacturers installation companies and investors *Renewable Energy Optimization, Planning and Control* Anita Khosla, Monika Aggarwal, 2021-09-28 This book gathers selected high quality research papers presented at International Conference on Renewable Technologies in Engineering ICRTE 2021 organized by Manav Rachna International Institute of Research Studies Faridabad Haryana India during 15 16 April 2021 The book includes conference papers on the theme Computational
