Science Learning and Instruction Marcia C. Linn, Bat-Sheva Eylon, 2011-05-20 Science Learning and Instruction describes advances in understanding the nature of science learning and their implications for the design of science instruction. The authors show how design patterns, design principles, and professional development opportunities coalesce to create and sustain effective instruction in each primary scientific domain: earth science, life science, and physical science. Calling for more in-depth and less fleeting coverage of science topics in order to accomplish knowledge integration, the book highlights the importance of designing the instructional materials, the examples that are introduced in each scientific domain, and the professional development that accompanies these materials. It argues that unless all these efforts are made simultaneously, educators cannot hope to improve science learning outcomes. The book also addresses how many policies, including curriculum standards, guidelines, and standardized tests, work against the goal of integrative understanding and discusses opportunities to rethink science education policies based on research findings from instruction that emphasizes such understanding.

Sponsored by the Association of Educational Communication and Technology (AECT), the third edition of this groundbreaking Handbook continues the mission of its predecessors to provide up-to-date summaries and syntheses of recent research pertinent to the educational uses of information and communication technologies. In addition to updating this new edition, it has been expanded from forty-one to fifty-six chapters, organized into the following six sections: foundations, strategies, technologies, models, design and development, and methodological issues. In response to feedback from users of the second edition, the following changes have been built into this edition: More Comprehensive topical coverage has been expanded from forty-one to fifty-six chapters and includes many more chapters on technology than in previous editions. Restructured Chapters: this edition features shorter chapters with introductory abstracts, keyword definitions, and extended bibliographies. More International: more than 20% of the contributing authors and one of the volume editors are non-American. Theoretical Focus: Part 1 provides expanded cross-disciplinary theoretical coverage. Methodological Focus: an extended methodological chapter begins with a comprehensive overview of research methods, followed by lengthy, separately authored sections devoted to specific methods. Research and Development Focus: another extended chapter with lengthy, separately authored sections covers educational technology research and development in different areas of investigation, e.g., experimental methods to determine the effectiveness of instructional designs, technology-based instructional interventions in research, research on instructional design models.
