

If $f_1 = f_2 = f_3$, then

AFO $\rightarrow y = mx^2$

$$\lim_{(x,y) \rightarrow (0,0)} f(x,y) = \lim_{x \rightarrow 0} f(x, mx^2) = f_y$$

If $f_1 = f_2 = f_3 \neq f_4$, then limit does not exist

||y we take infinite paths $y = mx^n, n \in \mathbb{R}$. $\frac{2}{3}, \frac{3}{4}$
 If in all these paths the limit is same then we say that the limit exists. $y = ax^{5/6}$

\rightarrow check whether the limit of the following functions exist or not.

$$1) \lim_{(x,y) \rightarrow (0,0)} \frac{x^2 y}{x^4 + y^2}$$

$$f_1 = \lim_{x \rightarrow 0} \left[\lim_{y \rightarrow 0} \frac{x^2 y}{x^4 + y^2} \right] = \lim_{x \rightarrow 0} [0] = 0$$

$$f_2 = \lim_{y \rightarrow 0} \left[\lim_{x \rightarrow 0} \frac{x^2 y}{x^4 + y^2} \right] = \lim_{y \rightarrow 0} [0] = 0$$

Along $y = mx$ $f_3 = \lim_{(x,y) \rightarrow (0,0)} \frac{x^2 y}{x^4 + y^2} = \lim_{x \rightarrow 0} \frac{x^2(mx)}{x^4 + m^2 x^2} = \frac{m x^3}{x^2(1+m^2)} = 0$

Along $y = mx^2$ $f_4 = \lim_{(x,y) \rightarrow (0,0)} \frac{x^2 y}{x^4 + y^2} = \lim_{x \rightarrow 0} \frac{x^2 m x^2}{x^4 + m^2 x^4} = \lim_{x \rightarrow 0} \frac{m x^4}{x^4(1+m^2)} = \frac{m}{1+m^2}$

$m=1, y=x^2 \rightarrow \frac{1}{1+1} = \frac{1}{2}$
 $m=2, y=2x^2 \rightarrow \frac{1}{1+4} = \frac{1}{5}$

Along $y = x^2 \rightarrow \frac{1}{2}$
 $y = 2x^2 \rightarrow \frac{1}{5}$

for different values of m we get different limits
 Hence the function does not have limit at $(0,0)$.

2) $\lim_{(x,y) \rightarrow (0,0)} \frac{y^2 - x^2}{x^2 + y^2} \rightarrow$ limit does not exist

$$\lim_{x \rightarrow 0} \frac{x^3 - (mx^3)^3}{x^2 + (mx^3)^2} = \lim_{x \rightarrow 0} \frac{x^3 - m^3 x^9}{x^2 + m^2 x^6} = \lim_{x \rightarrow 0} \frac{(x - m^3 x^6)}{1 + m^2 x^4} = 0$$

3) $\lim_{(x,y) \rightarrow (0,0)} \frac{x^3 - y^3}{x^2 + y^2} \rightarrow$

MAA Notes ,1983 *Multivariable Calculus* F. Beatrous,Caspar R. Curjel,2002 For a one semester sophomore level course in multivariable calculus for Engineering Mathematics or Science students Reform ideas traditional ideas and original ideas are combined in this text that is designed to teach concepts and computations especially intuitive ones about the geometry of 3 space The core concepts of multivariable calculus are presented in a straightforward but never simplistic language that will familiarize students with the thinking and speaking habits of mathematicians and ease their access to the mathematics of applications and higher mathematics courses Students are engaged through formulas and geometric reasoning In addition to calculating accurately students are asked to draw accurately in both two and three dimensions reason geometrically from figures make estimates based on ruler and pencil constructions and present their results verbally Helps students learn conceptual reasoning and reinforces learning by asking students to work the material in two different modes This is a spiral bound text Lays flat so students can draw in blank diagrams while reading the text A multitude of exercises are interwoven within the flow of the text T

Research in Collegiate Mathematics Education IV Ed Dubinsky,2000 This fourth volume of Research in Collegiate Mathematics Education RCME IV reflects the themes of student learning and calculus Included are overviews of calculus reform in France and in the U S and large scale and small scale longitudinal comparisons of students enrolled in first year reform courses and in traditional courses The work continues with detailed studies relating students understanding of calculus and associated topics Direct focus is then placed on instruction and student comprehension of courses other than calculus namely abstract algebra and number theory The volume concludes with a study of a concept that overlaps the areas of focus quantifiers The book clearly reflects the trend towards a growing community of researchers who systematically gather and distill data regarding collegiate mathematics teaching and learning This series is published in cooperation with the Mathematical Association of America Multivariable Calculus from Graphical, Numerical, and Symbolic Points of View Arnold Ostebee,Paul Zorn,1997 The text addresses a general mathematical audience mathematics majors science and engineering majors and non science majors The authors assume little more mathematical maturity than for single variable calculus but the presentation is not rigorous in the sense of mathematical analysis They want students to encounter understand and use the main concepts and methods of multivariable calculus and to see how they extend the simpler objects and ideas of elementary calculus They assume that students have the usual one year single variable calculus preparation but little or nothing more than that About this preliminary ed **Recountings** Joel Segel,2009-01-03 This book traces the history of the MIT Department of Mathematics one of the most important mathematics departments in the world through candid in depth lively conversations with a select and diverse group of its senior members The process reveals much about

Teach Yourself How to Learn Sandra Yancy McGuire, 2023-07-03 Following up on her acclaimed Teach Students How to Learn that describes teaching strategies to facilitate dramatic improvements in student learning and success Sandra McGuire here presents these secrets direct to students Her message is that Any student can use simple straightforward strategies to start making A's in their courses and enjoy a lifetime of deep effective learning Beginning with explaining how expectations about learning and the study efforts required differ between college and secondary school the author introduces her readers through the concept of metacognition to the importance and powerful consequences of understanding themselves as learners This framework and the recommended strategies that support it are useful for anyone moving on to a more advanced stage of education so this book also has an intended audience of students preparing to go to high school graduate school or professional school In a conversational tone and liberally illustrated by anecdotes of past students the author combines introducing readers to concepts like Bloom's Taxonomy to illuminate the difference between studying and learning fixed and growth mindsets as well as to what brain science has to tell us about rest nutrition and exercise together with such highly specific learning strategies as how to read a textbook manage their time and take tests With engaging exercises and thought provoking reflections this book is an ideal motivational and practical text for study skills and first year experience courses *Teach Students How to Learn* Sandra Yancy McGuire, 2023-07-03 Co published with NISOD Miriam

a freshman Calculus student at Louisiana State University made 37.5% on her first exam but 83% and 93% on the next two. Matt, a first year General Chemistry student at the University of Utah, scored 65% and 55% on his first two exams and 95% on his third. These are representative of thousands of students who decisively improved their grades by acting on the advice described in this book. What is preventing your students from performing according to expectations? Saundra McGuire offers a simple but profound answer: If you teach students how to learn and give them simple straightforward strategies to use, they can significantly increase their learning and performance. For over a decade, Saundra McGuire has been acclaimed for her presentations and workshops on metacognition and student learning because the tools and strategies she shares have enabled faculty to facilitate dramatic improvements in student learning and success. This book encapsulates the model and ideas she has developed in the past fifteen years—ideas that are being adopted by an increasing number of faculty with considerable effect. The methods she proposes do not require restructuring courses or an inordinate amount of time to teach. They can often be accomplished in a single session, transforming students from memorizers and regurgitators to students who begin to think critically and take responsibility for their own learning. Saundra McGuire takes the reader sequentially through the ideas and strategies that students need to understand and implement. First, she demonstrates how introducing students to metacognition and Bloom's Taxonomy reveals to them the importance of understanding how they learn and provides the lens through which they can view learning activities and measure their intellectual growth. Next, she presents a specific study system that can quickly empower students to maximize their learning. Then, she addresses the importance of dealing with emotion, attitudes, and motivation by suggesting ways to change students' mindsets about ability and by providing a range of strategies to boost motivation and learning. Finally, she offers guidance to faculty on partnering with campus learning centers. She pays particular attention to academically unprepared students, noting that the strategies she offers for this particular population are equally beneficial for all students. While stressing that there are many ways to teach effectively and that readers can be flexible in picking and choosing among the strategies she presents, Saundra McGuire offers the reader a step-by-step process for delivering the key messages of the book to students in as little as 50 minutes. Free online supplements provide three slide sets and a sample video lecture. This book is written primarily for faculty but will be equally useful for TAs, tutors, and learning center professionals. For readers with no background in education or cognitive psychology, the book avoids jargon and esoteric theory.
