Distributed Computing to Blockchain Rajiv Pandey, Sam Goundar, Shahnaz Fatima, 2023-04-08

Distributed Computing to Blockchain Architecture: Technology and Applications provides researchers, computer scientists, and data scientists with a comprehensive and applied reference covering the evolution of distributed systems, computing into blockchain, and associated systems. Divided into three major sections, the book explores the basic topics in the blockchain space, extending from distributed systems architecture, distributed ledger, decentralized web, to introductory aspects of cryptoeconomics, cryptography, and economics of decentralized applications. The book further explores advanced concepts such as smart contracts, distributed token mining, initial coin offerings, proof of work, public/private, and other blockchains, cryptography, security, and blockchains. The book goes on to review Byzantine fault tolerance, distributed ledgers versus blockchains, and blockchain protocols. The final section covers multiple use cases and applications of distributed computing and the future directions for blockchains. Presented as a focused reference handbook describing the evolution of distributed systems, blockchain, and consensus algorithms, emphasizing the architectural and functional aspects, it integrates the various concepts of cryptography in blockchain and further extends to blockchain forensics. Provides insight and detailed interpretation of algorithms for consensus in blockchains.
