The Dual Universe Ylia Callan,2025-08-17 The Dual Universe presents a bold and transformative vision of the cosmos revealing the dynamic cycle of creation and recycling that governs stars black holes and galaxies From the birth of matter in stellar furnaces to the enigmatic recycling processes within black holes this book explores how the universe sustains itself through an intricate cosmic feedback loop Integrating cutting edge astrophysics observational evidence and mathematical frameworks it offers a unified model that bridges cosmology thermodynamics and information theory Readers will encounter a thought provoking synthesis of science philosophy and metaphysics exploring the role of dark matter and dark energy the arrow of time and the ultimate fate of the universe With predictions for future research and a roadmap for understanding the cosmos as a living self regulating system The Dual Universe challenges our perceptions of creation destruction and cosmic continuity

General Relativity Simplified & Assessed Taha Sochi,2022-08-17 This book is about the general theory of relativity which is concisely labeled as general relativity The book is the result of a rather extensive view to the literature of this theory over most of its lifetime reflecting various stages of its development The book contains 129 solved problems as well as 606 exercises whose detailed solutions are published in another book that accompanies the present book The book also includes a detailed index and many cross references The book can be used as an introduction to general relativity at undergraduate and graduate levels Unlike most other books on general relativity which are mostly dedicated to the presentation justification application and validation of the formalism of the theory and hence rather minor attention is usually paid to the interpretation and epistemology of the theory this book is primarily interested in the interpretative and epistemological aspects of the theory

[The Dirac Equation in Curved Spacetime](#) Peter Collas,David Klein,2019-03-21 This book explains and develops the Dirac equation in the context of general relativistic quantum mechanics in a range of spacetime dimensions It clarifies the subject by carefully pointing out the various conventions used and explaining how they are related to each other The prerequisites are familiarity with general relativity and an exposure to the Dirac equation at the level of special relativistic quantum mechanics but a review of this latter topic is given in the first chapter as a reference and framework for the physical interpretations that follow Worked examples and exercises with solutions are provided

Appendices include reviews of topics used in the body of the text This book should benefit researchers and graduate students in general relativity and in condensed matter

[Advanced Concepts in Particle and Field Theory](#) Tristan Hübsch,2023-02-09 This 2015 advanced textbook now OA provides students with a unified understanding of all matter at a fundamental level

3+1 Formalism in General Relativity Éricourgoulhon,2012-02-29 This graduate level course based text is devoted to the 3+1 formalism of general relativity which also constitutes the theoretical foundations of numerical relativity The book starts by establishing the mathematical background differential geometry hypersurfaces embedded in space time foliation of space time by a family of space like hypersurfaces and then turns to the 3+1 decomposition of the Einstein equations giving

rise to the Cauchy problem with constraints which constitutes the core of 3+1 formalism The ADM Hamiltonian formulation of general relativity is also introduced at this stage Finally the decomposition of the matter and electromagnetic field equations is presented focusing on the astrophysically relevant cases of a perfect fluid and a perfect conductor ideal magnetohydrodynamics The second part of the book introduces more advanced topics the conformal transformation of the 3+1 metric on each hypersurface and the corresponding rewriting of the 3+1 Einstein equations the Isenberg Wilson Mathews approximation to general relativity global quantities associated with asymptotic flatness ADM mass linear and angular momentum and with symmetries Komar mass and angular momentum In the last part the initial data problem is studied the choice of spacetime coordinates within the 3+1 framework is discussed and various schemes for the time integration of the 3+1 Einstein equations are reviewed The prerequisites are those of a basic general relativity course with calculations and derivations presented in detail making this text complete and self contained Numerical techniques are not covered in this book
