Methods of IT Project Management, Fifth Edition Jeffrey L. Brewer, Kevin C. Dittman, Paul J. Thomas, 2015-09-15

Designed for graduate advanced undergraduate and practitioner project management courses with an information technology focus *Methods of IT Project Management* is designed around the Project Management Body of Knowledge PMBOK incorporating material from the latest seventh edition while still maintaining the book's process approach. The text provides students with all the concepts, techniques, artifacts, and methods found in the leading project management reference books and modern development methodologies: agile, hybrid, and traditional, while also conveying practical knowledge that can immediately be applied in real-world settings. This book uniquely integrates cutting-edge knowledge and techniques from the industry, ensuring that readers are equipped with the most current and relevant skills. Unlike other books in this area, the material is organized according to the sequence of a generic project life cycle: from project selection to initiation, planning, execution, control, and iteration, or project closeout. Following this life cycle approach, as opposed to covering the material by knowledge area or project performance domain, allows new learners to simultaneously study project management concepts and methods as they develop skills they can use immediately during and upon completion of the course. The text's structure also allows different programs to use the book during real-world projects.

It emphasizes the balance between learning skills, technical skills, and domain-specific skills in these industries, with special emphasis given to innovative software development models. The authors note that digital transformation requires complementary measures that are not overtly aimed to support infrastructure investment but are instead directed at promoting entrepreneurship, improving digital skills, engaging citizens, applying new transformation strategies, and developing innovative software. All of the above are considered strategically important, especially for medium-sized cities, since they enable them to be more competitive in the global economy.
