Machine Learning Denny Novikov,2021-04-12 55% OFF for Bookstores Are you thinking that as much as we want to look for logical frameworks for intelligence there is no certainty or scientific proof that intelligence is as structured as we believe it to be Your Customers Will Never Stop to Use this Awesome Book As in the evolutionary process where chaos and order wisely coexist I see a research gap related to our brain and mind typically related to focusing on models based solely on order But if we are researching Artificial Intelligence why are we so attached to the order and models that are supposed to be those of our brain Or what binds us so much to what we see only without opening spaces to what we don t see if only to consider them small pieces of chaos In this openness and vision when it comes to intelligence I propose a new concept that of unstructured intelligence which I will try to explain in this book In this book you will learn Automatic Learning Machine Learning Paradigms Inductive Learning Induction Of Decision Trees The relevance of attributes Algorithms Cluster And Much more I think one of the main reasons for AI s long winter was that we went deep into it creating architectures focused on existing paradigms with little investment in new technologies and standards such as machine learning itself But are we aren t repeating the same mistake in this new wave of AI If so I consider the main mistake too much focus on artificial neural network architectures as if this was the solution to solving complex learning problems in the human pattern or even the main door to generic artificial intelligence with semantic analysis capabilities And a possible solution to avoid the same history of past failure perhaps is to tackle high complexity real world learning problems

collectively and collaboratively such as creating AI systems that can teach them to learn for themselves like us humans So the architecture that seems to be the most logical for such problems is precisely the hybrid where we have the most varied types of learning In fact before we are born we are already learning in a hybrid way with labeled and unlabeled data by its very nature and all its mechanisms of evolution You may think that you don't remember any important labeled data when you were a baby or child but your mind and brain did a swell job to solve the puzzles that required some labeling to move on as unsupervised learning systems follow So we can think of a similar machine architecture where the basis for all inferences is supervised learning but capable of labeling any data that is not done by humans or other machines And even criticize existing labels We are actually talking about machine learning unsupervised to generate labels for machine learning And creativity in my view is one of the essential links to evolve in understanding and formalizing new machine learning models Do you really want to easily learn and understand Machine Learning Buy it NOW and let your customers get addicted to this amazing book
