GENERAL DESCRIPTION

The **ADAS1256** is a 256-channel, 16-bit, digital X-ray analog front end (AFE) that integrates the complete charge-to-digital conversion signal chain on a single chip. It enables a wide range of digital X-ray modalities, including portable radiology and mammography as well as high speed fluoroscopy and cardiac imaging. The **ADAS1256** is delivered on a high density system-on-flex (SOF) package that can be directly mounted on a digital X-ray panel.

All converted channel results are output on a single LVDS self-clocked serial interface that significantly reduces external hardware.

An SPI-compatible serial interface allows configuration of the AFE, using the SDI input. The SDO output allows the user to daisy-chain several AFEs on a single 3-wire bus.

An integrated AFE timing sequencer controls the sampling activity of the analog front end (AFE). The sequencer is programmed via the SPI port and is timed by a single clock, **ACLK**.
