Buss, 2003-05-19 Table of contents **Learn Three.js** Jos Dirksen, 2018-08-31 Create and animate stunning 3D browser based graphics with Three.js JavaScript library Key Features Enhance your 3D graphics with light sources shadows advanced materials and textures Load models from external sources and visualize and animate them directly from JavaScript Create your own custom WebGL shader and explore the postprocessing feature of Three.js Book Description WebGL makes it possible to create 3D graphics in the browser without having to use plugins such as Flash and Java Programming WebGL however is difficult and complex With Three.js it is possible to create stunning 3D graphics in an intuitive manner using JavaScript without having to learn WebGL With this book you'll learn how to create and animate beautiful looking 3D scenes directly in your browser utilizing the full

potential of WebGL and modern browsers It starts with the basic concepts and building blocks used in Three.js From there on it will expand on these subjects using extensive examples and code samples You will learn to create or load from externally created models realistic looking 3D objects using materials and textures You'll find out how to easily control the camera using the Three.js built-in camera controls which will enable you to fly or walk around the 3D scene you created You will then use the HTML5 video and canvas elements as a material for your 3D objects and to animate your models Finally you will learn to use morph and skeleton based animation and even how to add physics such as gravity and collision detection to your scene After reading this book you'll know everything that is required to create 3D animated graphics using Three.js What you will learn Work with the different types of materials in Three.js and see how they interact with your 3D objects and the rest of the environment Implement the different camera controls provided by Three.js to effortlessly navigate around your 3D scene Work with vertices directly to create snow rain and galaxy like effects Import and animate models from external formats such as OBJ STL and COLLADA Create and run animations using morph targets and bones animations Explore advanced textures on materials to create realistic looking 3D objects by using bump maps normal maps specular maps and light maps Interact directly with WebGL by creating custom vertex and fragment shaders Who this book is for The ideal target audience for this book would be JavaScript developers who want to learn how to use the Three.js library

Computer Graphics from Scratch Gabriel Gambetta, 2021-05-18 Computer Graphics from Scratch demystifies the algorithms used in modern graphics software and guides beginners through building photorealistic 3D renders Computer graphics programming books are often math heavy and intimidating for newcomers Not this one Computer Graphics from Scratch takes a simpler approach by keeping the math to a minimum and focusing on only one aspect of computer graphics 3D rendering You'll build two complete fully functional renderers a raytracer which simulates rays of light as they bounce off objects and a rasterizer which converts 3D models into 2D pixels As you progress you'll learn how to create realistic reflections and shadows and how to render a scene from any point of view Pseudocode examples throughout make it easy to write your renderers in any language and links to live JavaScript demos of each algorithm invite you to explore further on your own Learn how to Use perspective projection to draw 3D objects on a 2D plane Simulate the way rays of light interact with surfaces Add mirror like reflections and cast shadows to objects Render a scene from any camera position using clipping planes Use flat Gouraud and Phong shading to mimic real surface lighting Paint texture details onto basic shapes to create realistic looking objects Whether you're an aspiring graphics engineer or a novice programmer curious about how graphics algorithms work Gabriel Gambetta's simple clear explanations will quickly put computer graphics concepts and rendering techniques within your reach All you need is basic coding knowledge and high school math Computer Graphics from Scratch will cover the rest
