Metodo grafico

■ [A.a. 2011 - 2012 : ultima revisione 20 settembre 2011]

Come si è visto nell' Applicazione precedente, ciascun vincolo esterno o interno può essere sostituito dalle reazioni da esso esplicitate. Ad esempio, un carrello può essere sostituito da una forza - di valore incognito - ortogonale al piano di scorrimento del carrello stesso, mentre il valore della forza deve essere poi calcolato imponendo le equazioni di equilibrio. Analogamente, un appoggio è equivalente a due forze incognite, un incastro a due forze ed una coppia, etc. Sostituite le reazioni ai vincoli, si possono imporre le condizioni di equilibrio, tratto per tratto, tra le reazioni e le forze applicate.

In questa Applicazione si imporranno tali equilibri in forma grafica, tenendo conto che:

- un carrello definisce la retta d'azione della reazione, che passa per il carrello ed è ortogonale al piano di scorrimento
- un doppio bipendolo fornisce una coppia reattiva
- un appoggio, o una cerniera interna, può essere visto come equivalente ad una forza appartenente ad una retta che passa per l'appoggio (o per la cerniera), la cui direzione viene definita imponendo l'equilibrio
- un bipendolo, esterno o interno, può essere visto come equivalente ad una forza appartenente ad una retta ortogonale all'asse di scorrimento dei bipendoli, la cui posizione viene definita imponendo l'equilibrio
- un incastro è equivalente ad una retta di cui non è noto a priori né la direzione né la posizione, che dovranno calcolarsi in base alle condizioni di equilibrio

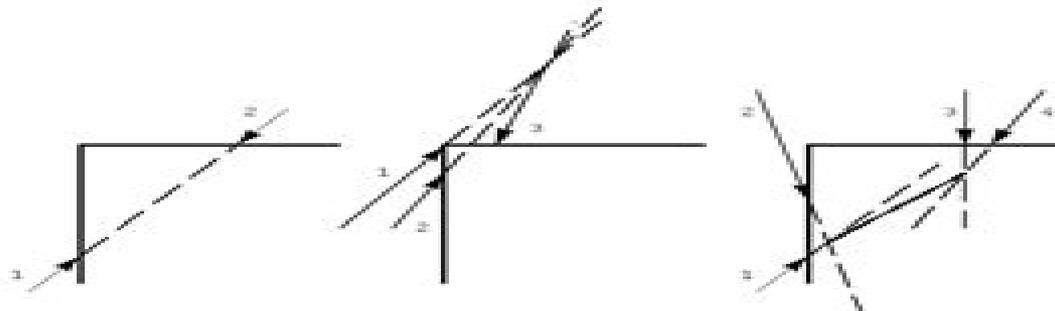

Figura 1 - Condizioni di equilibrio per tratto rigido soggetto a due, tre e quattro forze

Operate queste sostituzioni, le forze agenti su ciascun tratto rigido devono essere equilibrate, e possono presentarsi i seguenti casi:

- tratto rigido soggetto a 2 forze: per l'equilibrio, esse devono avere la stessa retta d'azione
- tratto rigido soggetto a 3 forze: per l'equilibrio, esse devono concorrere in un punto
- tratto rigido soggetto a 4 forze: per l'equilibrio, la risultante di due di esse deve avere la stessa retta d'azione della risultante delle altre due forze
- tratto rigido soggetto a 2 forze ed una coppia: per l'equilibrio, le due forze devono essere parallele, dirette in verso opposto, e a distanza tale da bilanciare la coppia
