This books contains the Proceedings of the 4th International Conference on Power Transmissions that was held in Sinaia Romania from June 20 23 2012 Power Transmissions is a very complex and multi disciplinary scientific field of Mechanical

Engineering that covers the different types of transmissions mechanical hydraulic pneumatic as well as all the machine elements involved such as gears bearings shafts couplings and a lot more It concerns not only their basic theory but also their design analysis testing application and maintenance The requirements set to modern power transmissions are really tough to meet They need to be more efficient stronger smaller noiseless easier to produce and to cost less There is a strong demand to become easier in operation and maintenance or even automatic and in maintenance free Last but not least they should be easily recycled and respect the environment Joint efforts of specialists from both academia and industry can significantly contribute to fulfill these needs The main goal of this conference was to bring together experts from all over the world and present the latest developments in the field of Power Transmissions

Wood, 1993 Mathematical modelling has a key role to play in the design analysis optimization and control of material processing technologies The task of modelling is interdisciplinary involving materials scientists process technologists as well as applied mathematicians This meeting brought together representatives from all branches of mathematical modelling from the researchers who develop models of the microstructural changes that occur during forming and the developers of algorithms and codes as simulation tools to those who employ such models and tools in an industrial context *Single Lane Live Load Distribution Factor for Decked Precast/prestressed Concrete Girder Bridges* John Zhongguo, J. Leroy Hulsey, 2005 The live load distribution factor DF equations provided by AASHTO LRFD for the decked precast prestressed concrete DPPC girder bridge system do not differentiate between a single or multilane loaded condition This practice results in a single lane load rating penalty for DPPC girder bridges The objective of this project is to determine DF equations which accurately predict the distribution factor of the DPPC girder bridge system when it is only subjected to single lane loading Eight DPPC girder bridges were instrumented Each bridge was loaded with a single load vehicle to simulate the single lane loaded condition The experimental data was used to calibrate 3D FE models and 2D grillage models of the DPPC girder bridge system The calibrated models were used to conduct a parametric study of the DPPC girder bridge system subjected to a single lane loaded condition Two sets of new equations that describe the single lane loaded distribution factor for both shear and moment forces of these bridges are proposed and compared with AASHTO LRFD DF equations **A Study on Acetabular Cup Deformation Measurement Methods and Finite Element Simulations** Kristopher K.
