Beyond Multiple Linear Regression Paul Roback, Julie Legler, 2021-01-14 Beyond Multiple Linear Regression Applied Generalized Linear Models and Multilevel Models in R is designed for undergraduate students who have successfully completed a multiple linear regression course helping them develop an expanded modeling toolkit that includes non normal responses and correlated structure Even though there is no mathematical prerequisite the authors still introduce fairly sophisticated topics such as likelihood theory zero inflated Poisson and parametric bootstrapping in an intuitive and applied manner The case studies and exercises feature real data and real research questions thus most of the data in the textbook comes from collaborative research conducted by the authors and their students or from student projects Every chapter

features a variety of conceptual exercises guided exercises and open ended exercises using real data After working through this material students will develop an expanded toolkit and a greater appreciation for the wider world of data and statistical modeling A solutions manual for all exercises is available to qualified instructors at the book s website at www.routledge.com and data sets and Rmd files for all case studies and exercises are available at the authors GitHub repo <https://github.com/proback/BeyondMLR> **Applied Statistics** John Neter,1993 [Applied Mechanics Reviews](#) ,2000 **Journal of the American Statistical Association** ,2008 [Solutions Manual for Statistical Analysis](#) Edward Clark Bryant,1960
