Fm Receiver Project Report:

A Digital Phase Locked Loop based Signal and Symbol Recovery System for Wireless Channel Basab Bijoy Purkayastha, Kandarpa Kumar Sarma, 2015-01-29 The book reports two approaches of implementation of the essential components of a Digital Phase Locked Loop based system for dealing with wireless channels showing Nakagami m fading. It is mostly observed in mobile communication. In the first approach, the structure of a Digital phase locked loop DPLL based on Zero Crossing ZC algorithm is proposed. In a modified form, the structure of a DPLL based systems for dealing with Nakagami m fading based on Least Square Polynomial Fitting Filter is proposed which operates at moderate sampling frequencies. A sixth order Least Square Polynomial Fitting LSPF block and Roots Approximator RA for better phase frequency detection has been implemented as a replacement of Phase Frequency Detector PFD and Loop Filter LF of a traditional DPLL which has helped to attain optimum performance of DPLL. The results of simulation of the proposed DPLL with Nakagami m fading and QPSK modulation is discussed in detail which shows that the proposed method provides better performance than existing systems of similar type.
