Beginning PhoneGap Thomas Myer,2011-12-06 Create cross platform mobile apps without having to learn a new language PhoneGap is an open source solution ideal for web developers wanting

to build cross platform mobile apps without having to learn a new language Using HTML CSS and Javascript PhoneGap allows you to jump into the mobile world and develop apps for iPhone Android and the BlackBerry Walks you through installing the development software Covers the basics of each of PhoneGap s functional units Introduces various projects you can build with the framework Discusses using HTML CSS JavaScript Explores the features accelerometer and compass Examines media storage and files camera contacts geolocation and more Within Beginning PhoneGap each new chapter builds on the lessons taught in the previous so that by the end of the book you can have mobile apps up and running NOTE Several significant changes to the PhoneGap software occurred shortly after this book was published The author has written extra pages to address these and other changes You can download the updates to this book from the book s support page on the Wrox website *Phonegap Mobile Application Development Cookbook* Matt Gifford,2012 **HTML5 Mobile App Development with PhoneGap** Mark Lassoff,2013 So you want to make legit mobile applications but you don t want to learn the native toolkits for Android iOS or even Windows 8 This course may be just the answer you re looking for Learn to create HTML5 based mobile applications that can be sold in the Apple App store the Google Playstore or other marketplaces If you know the basics of HTML CSS and Javascript you re ready to take this exciting course You ll be encouraged to code along with master instructor Mark Lassoff as you create applications that demonstrate many of the features available in the PhoneGap aka Cordova library You ll work with applications that control audio and video use remote data from a server and interact with the phone s camera and microphone hardware If you already know HTML CSS and Javascript you can be well on your way to creating engaging mobile applications that you can distribute to all major phone platforms without coding a line of Java or Objective C Using the PhoneGap platform and the techniques demonstrated in this course you can also write you code once and distribute to both iOS and Android easily This course includes hours of video lectures dozens of code and application examples and engaging lab exercises to help you retain the material once you have reviewed it **PhoneGap Investigation, Analyze of Missing Features and Extension Implementation** Javier Gavilán Martín,2011 This goal of this project is to investigate a framework called PhoneGap1 to see how it works and to extend it with an extension plugin This project is involved in another biggest project called C3World2 C3World is a project that is being done in collaboration with the TU Braunschweig the Leibniz University from Hannover and the OFFIS Institute in Oldenburg in collaboration with the Volkswagen Group Research This project tries to improve the communications in the cars and with the infotainment systems The subject which is been developed in the TU Braunschweig is the communication with a mobile device and the device on the car the user is driving with To develop that subject one of the goal is to do that communication cross platform so the car maker can make the car and this system will be used with all the mobile devices To beat that goal Jan Sonnenberg which is a professor in the Insitute f r Nachrichtentechnik and is the responsible of this project uses the framework mentioned above Another goal they are trying to beat is to share these applications between the mobile device and the car device so the

application that is downloaded in the mobile device could be also executed in the car device The framework PhoneGap is an open source framework that tries to give the chance to programmers to make their applications in standards languages such as HTML5 CSS and Javascript but without losing the opportunity to access the native functionality of every mobile device and of course being cross platform The scope of my particular project is first to know investigate about the framework about how does it work and how this framework is making the applications cross platform Second to analyze the actual connectivity features that car makers are introducing into the actual cars that are being manufactured Then to match and compare them with the PhoneGap actual features evaluating the interests of these features for the project And third from the above analysis I should get an idea of which extension could I program for the PhoneGap framework This extension should be something interesting for the project and should be an extension that could be real programmed From the beginning of this project my top motivation is that I like the idea of having a device on the car which can be used for driving but also for using it as an infotainment system Since the very beginning I started driving that issue passionate my What I found on this project is that this passion for car devices was joined with my second passion that is programming Summarizing I find very a interesting subject to have a cross platform system in the car from the point of view of the user the driver and from the point of view of the programmer
